1. Being a Referee

1.1 Thank You

To all our referees,

We want to take a moment to express our deepest gratitude for the critical role you play in promoting and improving the sport of Ultimate. Your dedication to officiating not only ensures the integrity of the game, but also helps shape the future of the sport for both players and fans alike.

- **Thank you for your commitment to studying the rules.** Your knowledge and understanding of the game are essential to providing fair, accurate calls and maintaining the flow of the game. Your effort to stay current with the evolving rules makes a significant difference in the quality of the experience for everyone involved.
- **Thank you for working hard to get into position.** Your physical and mental preparation is vital for maintaining proper positioning and being in the right place at the right time. The hustle you put into your role ensures you are in the best position to make accurate calls and be an effective part of the game.
- **Thank you for everything you do to improve this sport.** Whether it's through constant self-improvement, engaging with players, or providing feedback on the officiating process, your contributions help elevate the game. You are a key part of its growth and professionalism.
- **Thank you for making the most accurate calls you can make.** Your judgment directly impacts the outcome of the game. We understand that officiating is not always an easy task, but your commitment to making the right call, even in difficult moments, is invaluable.

While we know that, at times, you may not always receive gratitude from the players or fans during the game, please know that your work is truly appreciated. The role you play in the sport's development and success cannot be overstated.

So, once again: thank you.

1.2 What It Takes

Becoming a good referee takes four skills: knowing the rules, being confident, maintaining good positioning, and communicating clearly.

1.2.1 Know the rules

A thorough understanding of the rules is the foundation of being a good referee. It's crucial that you are well-versed in both the basic and nuanced aspects of Ultimate's rulebook. This knowledge allows you to make fair and accurate calls, and it helps you confidently address situations as they arise on the field. The more you study and understand the rules, the more effective you'll be in your decision-making. When questions arise, direct them to an official contact at the Central Office.

Make sure to watch this referee training video series during your preseason preparations, and check back throughout the season because new videos will be added as the season goes on. Link: [Referee Training Videos](https://audl.arbitersports.com/front/112909/BrainShark). [<https://audl.arbitersports.com/front/112909/BrainShark>]

1.2.2 Be confident

Confidence is key to gaining the respect of the players and maintaining control of the game. As a referee, your calls and decisions should be made with certainty. Even in challenging or controversial situations, your confidence helps to assert your authority on the field. When you demonstrate confidence in your decisions, it encourages players to trust your judgment and keeps the game moving smoothly.

1.2.3 Maintain good positioning

Good positioning takes hard work and hustle. Be in the best position to referee the threats in your primary area. Being in the right place means being able to see the players interact with each other, the players interact with the disc, and players and the disc interact with the lines. Being in a good position also means staying out of the way of the players and the disc. You will be refereeing every point, and you will need physical and mental strength to maintain good positioning. Stay healthy, stay in shape, and practice.

1.2.4 Communicating Clearly

Clear communication with players, fellow referees, and coaches is vital for effective officiating. Whether you're signaling a call, explaining a decision, or managing player behavior, being able to communicate concisely and effectively ensures that everyone understands what's happening on the field. Use hand signals, verbal cues, and body language to convey your decisions, and always strive to remain calm and professional in your interactions.

2. UFA Referee Overview

There are many different reasons we have all decided to pull on a referee jersey and become the arbiter of sport, but we all share some in common:

- a love of, and respect for, Ultimate;
- a desire to grow the sport; and
- a strong sense of personal responsibility and fortitude.

We, as officials, are on the field to ensure a safe, fair game in which the players determine the outcome within the rules of the sport. In fact, if the officials call the game evenly and consistently, they often go unnoticed. We are neither the heroes of the game nor the villains – despite what the crowd may chant, or players themselves may say. We are expected to be professionals, to rise above base emotions and avoid conflict with players, fans, and our officiating partners. Under the guidance of our Head Referee, we consistently apply our comprehensive knowledge of the rules and strive for flawless execution with every decision we make on the field.

On paper, it's perfect. Unfortunately, human error, misapplied rules knowledge, weather conditions, improper position creep, or hundreds of other complications sneak into our careers and cause us to make mistakes. Therefore, we need to prepare ourselves as completely as possible and do our best. The coaching staff and team ownership seldom expect perfection from the players, but expect it from the officials *every game*. As unrealistic as this may be, it is the truth, and it applies to all sports. Going into a game knowing this will help frame your mindset for the match.

2.1 Mindset

An official has a unique perspective on this sport - you are on the field with the players, helping transition them from college club player, club national champion, or outstanding multi-sport athlete to professional Ultimate player. For many players, this is the first time they have interacted with an official on field in this sport, and that novelty often creates tension. For example, during the inaugural season, players were used to tapping the disc in themselves after a foul, and the officials had to constantly remind them that play started when we said it did, not them. We established authority and maintained a consistency from game to game without interrupting natural game flow. We communicated with the players to remind them to wait for us from the time play stopped to when we sounded the whistle to start play. Establishing authority on the field comes from confidence and carries into respect from the players. Maintain a collegial attitude with players and you will find they respect your decisions, even the onerous ones, more than if you come out heavy-handed and brash.

Remember, mistakes happen. You cannot undo a call. Integrity rule or not, once you have blown the whistle and the players have stopped, that play is dead. A good catch ruled dead, or a foot ruled out, affects play. You cannot get those moments back, but you can minimize them through rules knowledge, hustle, and communication. When appropriate, referees may stop the clock and consult each other if there are conflicting views of a play. This should be done efficiently.

2.1.1 Communication

Before each game, the referees should meet and discuss situations from their last game, discuss any recent rules memoranda, and get into the officiating mindset. When required during the course of a game, talk to your partners. It is far better to slightly delay the game to get a call *correct* than to allow play to continue with an incorrect ruling. When new officials join a crew, talk to them and discuss how your crew works, the division of tasks, any on-field peculiarities, etc. It is important for everyone in the crew to work together.

2.2 Referee/Player Relationships

The relationship between referees and players is fundamental to maintaining fair play, respect, and a smooth flow of the game. Both parties play distinct roles, and mutual respect ensures that the game is conducted in a safe and professional manner. This section will outline the responsibilities, expectations, and key principles governing the interaction between referees and players.

2.2.1 The Referee's Role with Players

The referee's primary responsibility is to enforce the rules of the game while ensuring fairness, safety, and sportsmanship. Referees should approach their role with professionalism and impartiality, treating all players with equal respect. Here are the key aspects of the referee's role:

- **Enforcing the Rules of the Game:** Referees are responsible for applying the rules of the game to all players equally. They must make decisions based on their understanding of the game, the rules, and the specific situation.
- **Maintaining Control of the Game:** A referee should manage the tempo of the game, addressing any inappropriate behavior promptly, including dissent, unsporting conduct, and aggressive actions. Maintaining control ensures that players stay focused on the game.
- **Providing Clear Communication:** Referees should communicate clearly with players, especially when enforcing a decision or issuing warnings. A calm, authoritative voice establishes respect and understanding.
- **Safety First:** Ensuring the safety of all participants is paramount. Referees are responsible for stopping play if a player is injured and ensuring medical staff attends to injured players promptly.
- **Respecting Players' Rights:** Players have the right to participate in a game free from harassment, discrimination, or bias. Referees must remain neutral, and all their decisions should reflect the rules and spirit of the game.

2.2.2 The Player's Role with Referees

Players also have a responsibility in their interactions with referees. Understanding the importance of respect, discipline, and cooperation can lead to a more positive and effective relationship. Here are key aspects of the player's role:

- **Respecting the Authority of the Referee:** Players are expected to respect the referee's authority on and off the field. Referees make final decisions, and players must accept these decisions without argument, even if they disagree. Dissent or insubordination can lead to penalties or disciplinary action.
- **Adhering to the Rules:** Players must follow the rules of the game, and their conduct should always reflect fair play. They should avoid actions that could endanger themselves or others, such as reckless challenges or unsporting behavior.
- **Clear Communication:** Players should be polite and respectful when communicating with referees. If a player wishes to ask a question or seek clarification, it should be done respectfully and within the bounds of the game's flow.
- **No Intimidation or Aggression:** Players must avoid any form of verbal or physical intimidation. Aggressive behavior toward referees will not be tolerated and may lead to disciplinary action. The game should remain focused on sportsmanship.
- **Compliance with Decisions:** Once the referee makes a decision, players are expected to comply immediately. Players should not argue with the referee but rather focus on continuing the match with the right attitude.

2.2.3 Mutual Respect and Trust

A positive referee-player relationship is rooted in mutual respect and trust. The referee's role is to facilitate a fair game, while the player's role is to compete within the spirit of the rules. To maintain this balance:

- **Non-Verbal Communication:** Body language plays a significant role in the referee-player relationship. Referees should remain calm, assertive, and composed in all interactions. Players should avoid aggressive gestures, arguing, or showing frustration through body language.
- **Emotional Control:** Both referees and players should strive for emotional control. Referees must manage the emotional dynamics of the game while keeping their decisions consistent. Players must remain calm in the face of difficult decisions and focus on playing.
- **Education and Understanding:** Referees can help foster a better understanding of the game by explaining decisions in a clear and respectful manner when appropriate. Players who understand the reasoning behind certain decisions may be more inclined to accept them.

2.2.4 Handling Disputes and Conflict Resolution

Conflicts may arise during a game due to differing perspectives on calls or the intensity of the game. However, it is important for both referees and players to handle these moments professionally:

- **Calmly Addressing Disputes:** If a dispute arises, the referee should remain composed and handle the situation calmly. The referee may use a moment of pause to calmly address the issue with the player involved.
- **Warning and Sanctions:** In situations of serious dissent, referees may issue warnings or apply sanctions, such as technical fouls or other penalties. These actions should be carried out without animosity, ensuring that the focus remains on upholding the rules of the game.
- **Maintaining Authority Without Hostility:** Referees must assert their authority without becoming confrontational. Similarly, players should recognize that while they may not agree with every decision, they should continue to play with respect for the game's governing authority.

2.2.5 Building a Positive Environment

Ultimately, both the referee and the players share the common goal of ensuring a fair, safe, and enjoyable game. A positive environment is created when both parties work collaboratively toward this goal:

- **Sportsmanship:** Both referees and players should exemplify sportsmanship at all times. For referees, this means being impartial and fair, while for players, it means respecting the referee's role and maintaining discipline on the field.
- **Constructive Feedback:** At times, players or coaches may wish to provide feedback to referees, but this should be done in a constructive and respectful manner after the game, in the appropriate channels.
- **Commitment to Improvement:** Both referees and players should strive for continuous improvement. Referees can improve their decision-making and consistency, while players can enhance their skills and their ability to play by the rules.

3. Before the Game

On the day of the game, the Head Referee must first meet with the individual responsible for game day operations. This meeting should confirm the pre-game routine, including the national anthem, player introductions, and the coin toss. Additionally, the Head Referee should inquire about any special events planned, the duration of halftime, and any potential issues with the field or equipment that may affect the game, ensuring that the officiating crew is fully informed.

Following this, the Head Referee should convene a brief pre-game meeting with the officiating crew. This meeting will cover any new rules memoranda, important topics discussed in the most recent Head Referee conference call, and any specifics related to the game that day. This ensures the crew is well-prepared and aligned on all aspects of the game.

3.1 Head Referee Pre-Game Responsibilities

- **24-48 hours prior to the Opening Pull:** the Head Referee should check the game crew via their schedule in Arbiter Sports and reach out to the crew assigned to that game and confirm any pre-game instructions and that all officials are prepared for game day. (See 3.3 Referee Equipment Checklist)
- **60 to 90 Minutes prior to the Opening Pull:** the Head Referee should arrive at the field and meet with the person in charge of game day operations to confirm the pre-game routine (anthem, introductions, coin flip) and find out if there are special events planned, how long halftime will be, and if there are issues with the field or equipment of which the crew needs to be aware. (See 3.7 Pre-Game Checklist)
- **45 to 60 Minutes Prior to the Opening Pull:** the Head Referee will then conduct a brief pre-game meeting with their crew members & the clock operator. (See 3.4 Pre-Game Meeting)
- **30 to 45 Minutes Prior to the Opening Pull:** Meet with coaches and clock operator. The on-field ref should handle the clock briefing while the head ref and that coach's SR meets with the coach. (See 3.5 Pre-Game Coaches' Meeting)
- **15 to 30 Minutes Prior to the Opening Pull:** debrief any notes from coaches' meetings with the crew. Discuss any observations from warm-ups.
- **10 to 15 Minutes Prior to the Opening Pull:** convene the referee crew and the team coaches and captains at midfield to conduct the coin flip and pre-game briefing. (See 3.6 Pre-Game Players' Meeting)

3.2 On Field and Sideline Officials Pre-Game Responsibilities

- **60 Minutes Prior to the Opening Pull:** (or earlier if specified by the Head Referee during Pre-Game communications) the Officials should arrive at the field and meet with the Head Referee.
- **45 Minutes Prior to the Opening Pull:** the Head Referee should conduct a brief pre-game meeting with the referee crew and the clock operator.
- **30 to 45 minutes Prior to the Opening Pull:** the on-field ref should handle the clock briefing with the clock operator. The sideline ref will meet with the head ref and head coach from their sideline.
- **15 to 30 minutes Prior to Opening Pull:** meet with the entire crew to debrief from any information learned from previous meetings and observations from warm ups.

3.3 Referee Equipment

The UFA will provide or cover the cost of matching jerseys and hats for all referees. Jerseys are to be worn tucked in at all times. The head referee will wear a white hat as determined by the league.

It is suggested that sideline referees carry markers to indicate where a disc has left the playing field.

Equipment required for each game includes:

- UFA referee black or white hat (depending on role)
- UFA referee jersey (tucked in)
- Black base layers (if needed)
- Black shorts, skirt, or pants
- Black socks, ankle length or shorter
- Black cleats or turf shoes (black preferred, white or muted permitted)
- Sideline marker
- Stopwatch
- Whistle (Fox 40)
- Coin
- Rulebook

3.4 Pre-Game Officials' Meeting

During the Pre-Game Officials' Meeting with the Referee Crew and Clock Operator, discuss any high-level timing reminders: final minute of quarter rules, common timing complications, how you will communicate during the game for clock resets, etc. After reviewing the timing reminders and any additional information you want to discuss with the clock operator, allow them to return to the booth and continue the Pre-Game Officials' Meeting.

The Head Referee should give their thoughts on any high-level items that have been discussed as league wide points of emphasis as well as a reminder for safety first. The Head Referee should then use any additional time to align the crew and give any final notes or personal emphasis and take any final questions from the Referee Crew. At this time, also review each referee's notecards from the season on things they are doing well and things they want to improve.

3.5 Pre-Game Coaches' Meeting

The pre-game coach's meeting is a short check-in with each head coach. The Sideline Ref corresponding to that coach's sideline should also attend the meeting with the Head Ref. Introduce the coach to the SR so each person knows who to look for in the event of timeouts called from the sideline. Assure the coach that they can leave the player's box without penalty to get the attention of the SR to call a timeout. Ask the coach if they have any concerns for the upcoming game. If there are any special points of emphasis from the league that the coach needs to be aware of, this is a good time to provide a reminder. This should be a very short meeting.

3.6 Pre-Game Players' Meeting

When ready, have coaches and captains join you at midfield for the pre-game meeting and coin toss. You may want to do this closer to the booth for easier communication, depending on the stadium.

The Head Referee will introduce the crew and allow for handshakes between players and referees. The Head Referee can give a quick talk about their expectations for the game, and remind players of the integrity rule, unsporting acts calls, and any recent points of emphasis from the league. This time is also your chance to establish a positive relationship with both teams and to foster a culture of cooperation and respect between the teams and the refs. Clearly inform the teams that you expect them to play by the rules, and that you will be doing your very best to give them a well called game. Tell them that you are open to respectful communication, and that you will be happy to chat with them whenever there is time, such as during a timeout, between periods of play, or between points — as long as everyone hustles. Make it clear that you are willing to give helpful explanations or listen to feedback as long as there is time and everyone is appropriate.

Ask the teams if they have any questions and resolve them.

Flip the coin, not a disc, with the visiting team calling. Gesture towards the winning team and ask for their choice of possession or position. Note that they must make a choice and are not allowed to defer any option. This indicates who won the coin toss to the timing or media booth. When they have made their choice, position the captains to represent where they will be standing for the pull. The Head Referee will then move to stand with the team that will be receiving the pull and make the “basket catch” signal. Wish both teams good luck and prepare to start the game.

3.7 Pre-Game Checklist

Before each game, ensure that you do the following:

- Arrive at the field 60 minutes before the opening pull.
- Survey the field, inspecting lines, pylons placement, and potential hazards (sprinklers, posts, etc.).
- Check that benches are in the players’ box: between the 20 and 40 if teams are on the same sideline and between the 20s otherwise. Benches must also be at least six yards away from the field perimeter to keep players out of this restricted area.
- Acquire ten discs from the home team. Keep one and give two each to the two Disc Runners who will be following the play. If there are no Disc Runners, place one disc at each corner of the playing field and along the sidelines. Also place 1 disc mid-field behind the back line of the endzone for easy retrieval on roller pulls that go out the back.
- Determine who will keep the score.
- Ensure that each team has 12-20 active players. Inactive players should be extremely conspicuous (e.g., team t-shirt, polo, warmup gear, etc.). Jerseys of the opposite color are also acceptable for inactive players.
- Ensure that players wear matching uniforms with proper numbering and matching team hats, if worn. We expect refs to only officiate egregious abuse of the uniform rules in 3.2.7, not nit-pick. However, team hat standards are not a nitpicky item, teams must choose 1 team hat to be worn during the game. If a player has a mismatching number on shorts and shirt, then it is preferred that the player wear the correct name/number jersey and make sure that the statisticians for both teams are aware of the discrepancy.
- Inspect players for any dangerous jewelry including metal items around the wrist such as a metal watch, or jewelry with sharp edges or points that could lead to safety issues.
- Make sure that any hard protective object a player wears is covered with an appropriate soft material.
- Each referee should be tracking 1 good thing they have done each game and 1 thing they need to improve. Remind refs to read their cards on what to work on.

3.8 Head Referee Post-Game Responsibilities

After the game, the crew should meet in the designated referee area for a final briefing. Each referee should think of one thing they did well and one thing they want to improve. Have the refs write these things down so that it can be brought to future games and reviewed at the pre-game meeting. Keeping this list and reviewing

before the next game will help refs to focus and improve on specific areas to improve the individual as a ref, and the league officiating in general.

The Head Referee is responsible to file the post-game report on ArbiterSports within 24 hours of the completion of the game. A red “R” will appear for the Head Referee next to the game assignment in ArbiterSports. Click on the red “R” and input the final score. Use the comments section to list specific information regarding game day or game play you think the Director of Officiating needs to be aware of for future review or reference. **All ejections and Unsporting Act calls need to be added as individual submissions to the UC Database [<https://forms.gle/LtduuqzuoDwjNLn76>].** If there are any ejections or seriously dangerous plays, please text or email the Director of Officiating immediately so the league can respond quickly.

4. Positioning

Correct positioning is important both to ensure the best perspective to make good calls and for perception by the teams and fans that the official has a good view of the play to make the right call. Always work to be in the best position to see the threats in your primary area of responsibility.

Before the game, determine which Sideline Referee (SR) is paired with which Field Referee (FR). Field Referees can also be called Trail Referees (TR) or Deep Referees (DR). How you pair can be based on game conditions such as wind direction, referee speed, flip of a coin, etc. The FR's status as a Trail or Deep determines where their corresponding SR will position themselves and where each ref's primary area of responsibility lies.

In all of the following diagrams, the left FR is paired with the top SR, and the right FR is paired with the bottom SR.

4.1 Pull Positioning

After a score, or to start a quarter or overtime period, refs will position in the pulling formation. The initial positions are:

- **Pulling Referee (PR):** The referee with the pulling team, who will become the **Deep Referee (DR)**. Position by straddling the pulling line, which is the brick mark line, with all players in front of you.
- **Receiving Referee (RR):** The referee with the receiving team, who will become the **Trail Referee (TR)**. After receiving readiness, position along the reverse brick, between players so that you can see all receiving team players and the puller from the opposing team.
- **Sideline Referee 1 (SR1):** Sideline Referee paired with the Pulling Ref, as determined before the game. Position at the midfield line.
- **Sideline Referee 2 (SR2):** Sideline Referee paired with the receiving ref, as determined before the game. Position 5-10 yards towards the field from the front of the receiving team goal line.

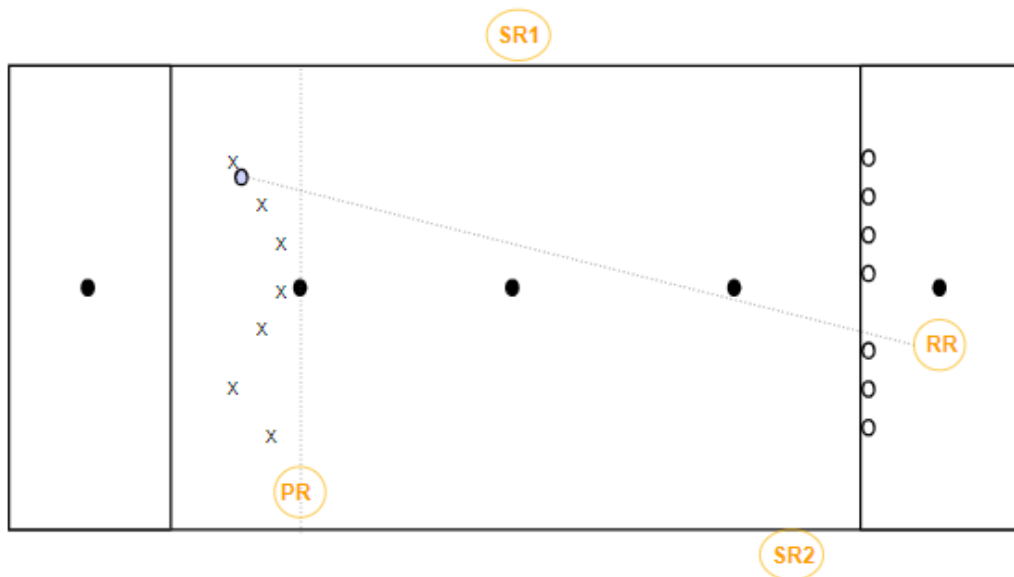

Figure 1: Initial referee setup positions

It is preferred that both on field refs keep time. This helps with time between points and reduces time signal miscues. As soon as the previous point is scored, the on field refs will start the stopwatch. The PR will begin moving into position. The two SRs and RR can begin to move into their initial pulling positions, but should also continue to watch players and the disc until teams have separated in case of any dead disc issues.

The SR paired with the PR positions themselves at the midfield line. If the pull lands in-bounds and then rolls out of bounds, it is the responsibility of this SR to verify that the disc rolled out of bounds beyond mid-field. If the disc rolls out of bounds before mid-field, the SR immediately communicates where the disc rolled out to the RR so the disc is placed at the proper location. It is recommended that both SRs hold a disc until the pull has been released and then drop the disc off the field. This helps in quick placement and start of game play.

The SR paired with the RR should be within 5-10 yards of the front goal line. The SR needs to be positioned to be able to cover the front goal line to look for Callahans in the event that the pull lands in the endzone.

4.1.1 Pre-Pull Formation Mechanics

At 10 seconds, the RR announces “20 seconds for a hand” and shows the receiving team the double closed fist hand signal. At this point, the RR is typically standing in front of or to the side of the receiving team.

At 20 seconds, the RR announces “10 seconds for a hand” to the receiving team and shows the receiving team the single closed fist hand signal. At this point, the RR starts arm chopping at one second intervals and keeps a silent count in their head.

At 25 seconds (5 seconds until readiness required), the RR can warn the receiving team “5 seconds for a hand.” If the receiving team does not hold position and does not indicate readiness, the RR should walk towards the team to nudge them to signal readiness. If 30 seconds expires and the receiving team has their feet on the line and looks ready, then the RR should hold one hand up with an open palm to signal to the PR that the receiving team has signaled readiness and start moving to a position at the reverse brick, in between players so that they can see all members of the receiving team and the puller from the opposing team.

The RR will remind the receiving team that they must hold position (“hold the line”) from the time readiness is signaled until the pull is released. Note that players are still free to move side to side along the line, so long as they maintain contact with the line and do not change positions with anyone else. The RR is responsible for watching that the receiving team does not switch position and that each team member keeps at least one foot on the line until the pull has been released. Violations of these are offside infractions.

Note: Sometimes receiving teams will ask if they can have readiness after their entire 30 seconds has elapsed. This usually comes with a request such as “we’ll take the full time” or “ready at zero”. It is fine to acknowledge and grant this request and helps build respect and rapport with teams. In this case, you do not have to give loud, audible time signals, except to let them know that you’ve hit zero and that readiness has been given. However, still arm chop the final 10 seconds so everyone has a visual cue that their time is almost up.

If the receiving team is not ready to go with exactly seven players after 30 seconds, the RR will blow the whistle, and signal a Delay of Game penalty. The receiving team must now move back 10 yards deep into their defending end zone. If the penalty was due to having too few or too many players on the line (or seven on the line, but with stragglers not getting off the field), work with the team to remedy this ASAP. The PR will then instruct the pulling team to move 10 yards towards their attacking end zone. After announcing and communicating the Delay of Game penalty, and helping the team to promptly address the issue, instruct the receiving team that they have 10 further seconds to signal readiness. Restart the pre-pull procedure as if 20 seconds had elapsed from the previous score. Note that if the team prefers to use a timeout to allow the illegal substitution and prevent the 10 yard penalty, then this is allowed as long as the team has timeouts available.

At 30 seconds, the PR should make sure that the RR has their hand raised to signal readiness before announcing 20 seconds to pull to the pulling team. At the beginning of a period, also make sure the clock has been reset before signaling readiness or allowing the defense to pull. If the receiving team signals readiness before 30 seconds have elapsed, the pulling team is still allowed the full 50 seconds to pull. If readiness is

given early, the PR announces to the pulling team that they're free to pull and should give them an idea of how much time they have left. It can be helpful for the PR to stand in front of the pulling team until the RR signals readiness so the pulling team doesn't pull early. Once 30 seconds have passed and the RR has a hand raised, the PR announces "20 seconds to pull" and gives the double fist signal. The PR should move into position at the pulling line, straddling the defended brick line, with all players in front of them, so they are ready to watch for offsides whenever the pull is thrown. At 10 seconds, the PR announces "10 seconds to pull," giving the single fist hand signal, and begins to arm chop the last 10 seconds. At five seconds, they should give a verbal warning as well.

If the pulling process has not begun (with seven players on the pulling team) **at the end of the 50 seconds**, the PR blows the whistle and signals a Delay of Game penalty (note: if the pulling team is in the pulling process with seven players as time expires it is not necessary to signal a Delay of Game so that we do not unnecessarily hold up the game).

If a Delay of Game penalty is called, the pulling team moves back 10 yards towards their defending end zone. The RR then instructs the receiving team to move 10 yards towards their attacking end zone. Restart the pre-pull procedure from the 20 second mark (i.e., the receiving team gets another 10 seconds to signal readiness, though the RR should feel free to hustle the receiving team along).

4.1.2 Post-Pull Formation Mechanics

When the pull is thrown, the PR is responsible for watching that no member of the pulling team breaks the vertical plane of the defended brick line with either foot before the pull is released. Violation of this is an Offside infraction (Section 4.2). Note that the infraction occurs as soon as any foot breaks the vertical plane, not when a foot finally touches the ground.

Once the pull is released, if there is more than 1 minute left in the quarter or OT, then the RR winds their arm to start the clock. For under 1 minute, the RR waits to wind their arm to start the clock at the appropriate time, depending on where the pull lands.

Each SR is responsible for spotting out of bounds pulls. If the disc crosses the perimeter line in the air, the SR marks where the disc crossed the perimeter line and then watches to see if the disc crosses back. If the disc crosses back, the SR can release to their normal position. Otherwise, the SR communicates where the disc went out of bounds so the TR can make sure the disc is put into play at the proper location. If the disc lands inbounds and rolls out of bounds beyond midfield, the SR should place a disc or beanbag to mark the point on the sideline where the disc should come into play. If the disc lands inbounds and rolls out of bounds before midfield, the SR makes the "brick mark" signal to the TR by clapping hands over their head, and then marking the yardage line where the disc should be put into play. Once it is known where the disc will come into play, the SRs should get into regular play positions.

The PR should start working down the field to get into position, while watching the pulling team run down field to get in position on defense. Be sure to watch players rather than the disc so you can watch out for any collisions or contact once the defense engages the offense.

The RR should read where the disc will land or be caught and set themselves up in the proper position to act as the Trail Referee (TR). If the disc is going to land in the endzone, then the SR paired with the TR should straddle the front endzone line to watch for potential Callahans.

If a brick/middle situation occurs due to a pull going out of bounds on the fly or a roller pull going out of bounds before getting to midfield, the RR will ask the receiving team what option they are choosing, then indicate where the offense can bring the disc into play and blow the whistle/wind the arm when play is ready to begin. The SRs should get into their respective positions as described below.

4.1.3 Pulling Summary

For a pull with no infractions, this table provides a summary of the pulling formation process and mechanics.

Time (s)	Pulling Ref	SR w/ PR	Receiving Ref	SR w/ RR
:10	Continue watching teams as they cross	Continue watching teams as they cross	Announce & signal 20 seconds for a hand to the receiving team	Continue watching teams as they cross
:20		Get into position at mid field	Announce & signal 10 seconds for a hand to the receiving team. Begin arm chopping time	Get into position 0-10yards from front endzone line of receiving team
:25			Give 5 second warning if necessary	
:30	Announce & signal 20 seconds for a hand to the pulling team		If no readiness given, warn team to hold positions, raise arm and position at reverse brick	
:40	Announce & signal 10 seconds for a hand to the pulling team. Begin arm chopping time. Straddle pulling line.			
:50	Watch for off-sides as pull goes off	Note if the pull lands in bounds/rolls OB before/after mid field. If disc flies OB, note where the disc crossed perimeter line.	Once Pull is off, wind arm at appropriate time to start clock depending on if >60s or <60s.	Note if the pull lands OB and location on perimeter line. Be prepared to watch for Callahans.

4.2 Offside Infraction

Rule 6.2.7 covers Offside Infractions. There are no warnings for offside. If an Offside Infraction occurs, immediately signal and assess the appropriate yardage penalty. Allow both teams a reasonable time to set up so that there is no significant advantage to the offense or defense when the disc is whistled into play.

4.3 Positioning During Play

4.3.1 Positioning During Regular Play

During regular play, the four referees should be working in a staggered formation.

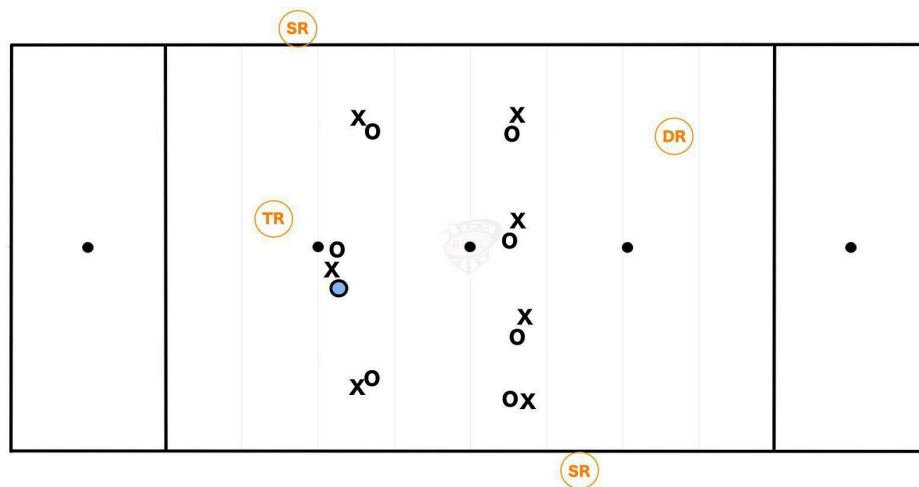

Figure 2: Positioning during normal play.

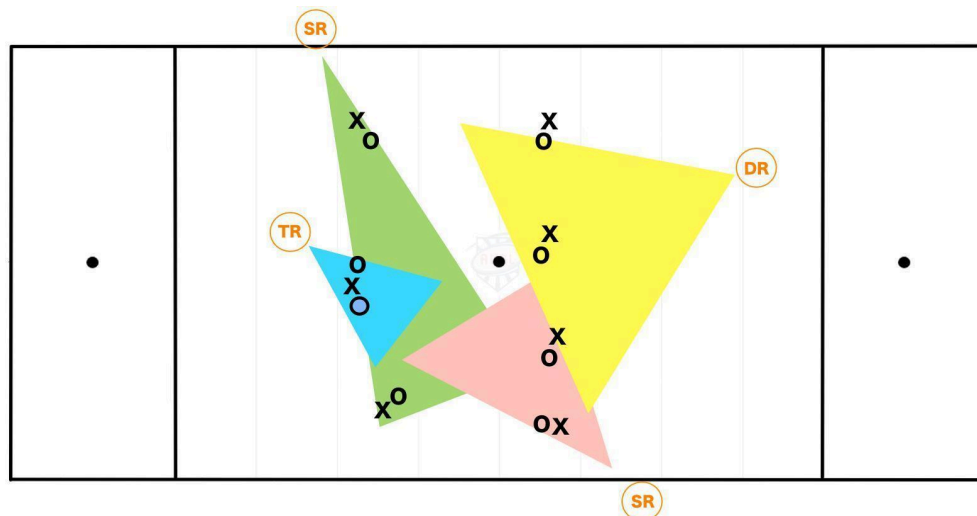

Figure 3: Ideal field of vision during normal play.

The **Trail Referee** (TR) should be positioned behind the thrower about seven to ten yards and offset, similar to a deep dump. Ideally, this is on the break side as this usually provides the best view of thrower-marker interaction. The TR should be able to see the space between marker and thrower. As the disc is swung back and forth between handlers, this will not always be possible, so the TR's main priority should be to get as

good a view of the thrower-marker interaction as possible. The TR should also be aware of potential dump cuts and ensure they are far enough back so as not to interfere.

The **Sideline Referees** (SR) have a primary responsibility of in- and out-of-bounds calls on their sideline.

The SR corresponding to the TR will position themselves on the sideline roughly 10 yards ahead of the disc. This SR has an additional primary responsibility for watching all off-disc handler interactions. Watch for fouls on the dump and/or swing handlers. They also have responsibility to watch the goal line call on Callahans, thus, when the disc is in the defending end zone or within roughly 5 yards of the defending goal line, they should be locked on the defending goal line until the disc moves sufficiently upfield. This SR can also assist with thrower-marker interaction and thrower travels, especially when the disc is trapped on their sideline.

The other SR, corresponding with the DR, will position 35-40 yards downfield, so that they can watch downfield interaction more, focusing primarily on their half of the field and middle of the stack. Since the other SR is positioned to cover deep on any turnover, there is less worry about sprinting further to get into position on a turn.

On a huck that comes up short of the end zone, the TR will not have a good view of thrower/marker interaction and potential travel calls. The deep SR should pick up these responsibilities temporarily while the TR can hustle into position. The TR still keeps the stall count. If the play is near the opposition sideline, the near SR should pick up these responsibilities as quickly as possible until the TR gets there.

SRs are also typically at a better angle to watch “change of direction” style receiver travels (turning upfield after a catch) and are encouraged to watch for these diligently.

The **Deep Referee** (DR) should be positioned well behind the last man back. In zone defense, the DR needs to be deeper than the deep. The DR will need to be sure they are in position to watch receptions and the back line on deep passes, so they cannot get beat deep. Remember that these players are fast; “if you’re even, they’re leavin’.” Playing deep also gives the DR a better field of vision to watch everything going on in the middle of the field, though they will primarily focus on the other half of the field that their corresponding SR is not covering. The DR will need to reposition themselves as the disc swings from side to side so that they are on the opposite half of the field from where the disc is as this will give a better viewing angle. On a huck, the DR should stop at the goal line if the play will be close as the SRs will not be in a position to watch whether the disc is caught in or out of the end zone. The DR needs to drop to the back line as soon as a SR is in position.

The DR should be the referee least concerned with watching the disc, so they should position themselves instead to best watch for picks, clutching and grabbing, and other off-disc infractions.

Figure 3 outlines the ideal vision cones for the referees in normal formation.

4.3.2 Positioning When Disc on the Sidelines

When the disc is on a sideline, the TR will likely need to position themselves further back than normal since the area behind the thrower is more important and will be more closely contested.

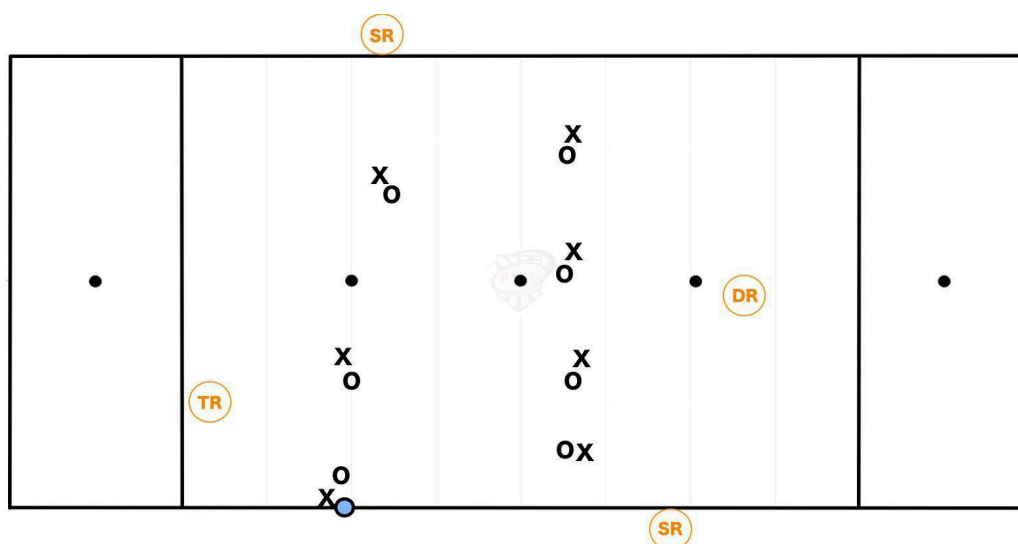

Figure 4: Positioning with the disc on the sideline.

In some cases, the TR may find it better to position themselves out of bounds so as to stay totally out of the way and still have a good view of thrower-marker interactions, especially if the defense is double teaming.

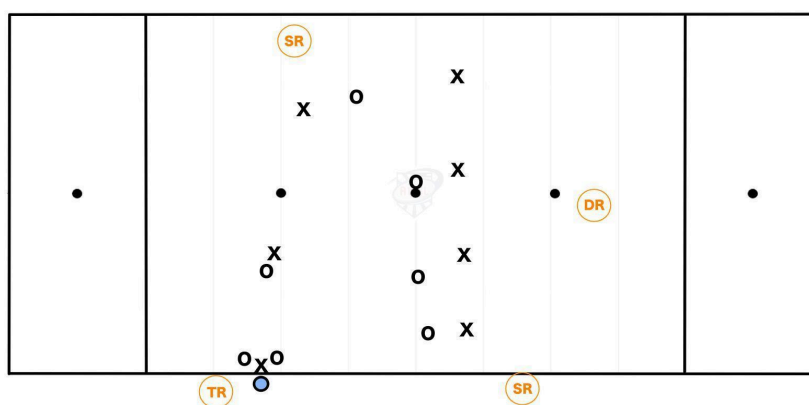

Figure 5: Positioning for a sideline double team. Also applicable as alternate positioning on a sideline trap.

Other than this, the SR on the trapped sideline will want to make sure they leave room for the offense if they want to go up the line, but be prepared to make an in/out call. With double teams, the TR and their corresponding SR should try to bracket the thrower as much as possible to get maximum coverage and eliminate potentially redundant viewpoints. This is easier if the double team trap is on the near SR's sideline. If it's on the far sideline from them, the SR may come as far onto the field as possible to provide coverage, while taking care to be out of the way should a big over the top swing throw come their way.

Optionally, the SRs may briefly switch responsibilities to cover a sideline double-team. Meaning, the downfield SR may have to temporarily become the trail SR and position slightly more up field to cover the double team. This should be discussed in pregame so the crew is aligned with how they intend to handle sideline double-teams to ensure best coverage of the double-team as well as the rest of the field.

4.3.3 Positioning When Disc is in the Red Zone

Once the offense has possession between the attack brick and the goal line, the referees should work into a rather static diamond formation. The TR will continue to follow dump and swing activity. Once the disc is close to the redzone, both SRs should be on the goal line, and then stay firmly on the goal line until a point is scored or there is a turnover. This is necessary to make accurate line calls, as a throw to the endzone can happen very quickly. The DR will position on the back line, though the DR may want to move back and forth along this line as play moves laterally so that they can watch for picks, fouls in the stack, and receptions near the back line.

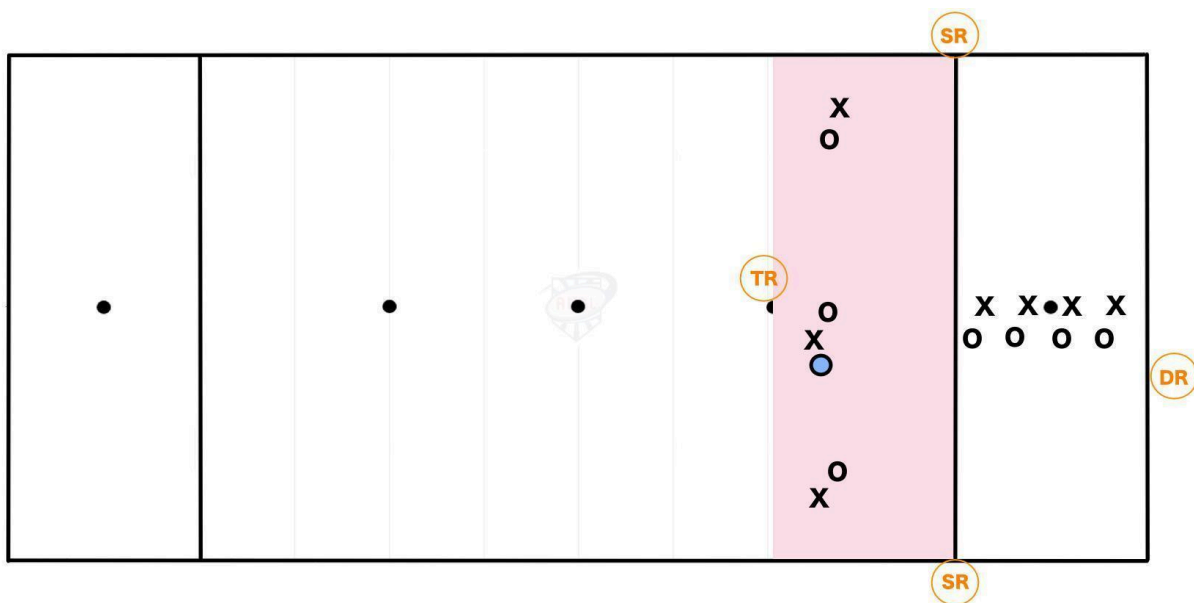

Figure 6: Positions when play is close to the end zone.

4.3.4 End of Quarter Preparing for a Huck - After Pull or Timeouts

When the disc is put into play with less than 10 seconds on the clock, there is limited time before a buzzer-beater throw to the endzone. Therefore, referees need to adjust positioning for the known upcoming threat.

The Trail Ref continues to follow the thrower/marker.

The Deep Ref needs to be in the endzone or ready to cover the back endzone line, depending on how far the disc is downfield. If the disc is beyond midfield, then set up in the middle of the endzone. If the disc is before midfield, then set up on the back endzone line.

If the situation arises after a pull, then the SR paired with the DR should move quickly to the front endzone line after the pull. Continue to watch the players on the field while getting into position in case of collisions, picks, or other infractions.

The SR paired with the TR needs to be aware of where the disc is to choose the appropriate positioning to referee the biggest threats. If play is within the primary playing field, then the SR should position closer to the attacking endzone, deeper than their normal position, ready to help with any pass interference and in/out

calls as the disc is thrown to the endzone. Even in the deeper position, the SR needs to watch the space closer to the disc for infractions at the top of the stack and dump space.

If the disc is pulled into the defended endzone and there is enough time on the clock for a pass, then the SR needs to be on the front endzone line of the defended endzone in case there is a Callahan. Once this threat has passed, hustle to the deeper position to anticipate the end of quarter huck.

4.4 Three Person Mechanics

Sometimes unforeseen circumstances result in only three officials being available for a game. These could include last minute injury or illness, or an in-game injury to a working official. In these circumstances, a crew may find themselves having to work with only three people. This section deals with modifications to regular mechanics when only three officials are available.

4.4.1 General Changes

In a three person crew, there will be two On Field Referees (keeping the same Trail Referee and Deep Referee designations depending which way the offense is going) and one Sideline Referee. When deciding which sideline the Sideline will work on, it's recommended to use this order to decide:

1. If both teams are sharing one sideline, the Sideline Referee should work that sideline so that both coaches have easy access to call timeouts.
2. If the teams are on different sidelines and there is a definite and strong cross breeze, the Sideline Referee should work the sideline that the wind is going towards since the disc will likely be on this side of the field more often.
3. If the teams are on different sidelines and there is no cross breeze of note, the Sideline Referee should work on the sideline opposite to the Press Box or Scorer's Table so that all officials are at their most visible.

Before the game, the three members of the crew should determine whether the Sideline Official will assume both scoring and watch duties, or if they will only assume scoring duties with the On Field Referees splitting responsibility for between points and timeout timing.

In general, the two On Field Referees will share responsibility for the uncovered sideline with the Deep Referee working closer to the sideline than normal since they'll have responsibility for in/out of bounds.

In general, the Sideline Referee will act as if they're partnered with the Deep Referee.

4.4.2 Positioning Before the Pull Changes

The Pulling Referee should ensure they're positioned on the uncovered sideline when watching for offsides so that they're ready to assume sideline responsibilities after the pull.

4.4.3 Positioning During the Pull Changes

The Sideline Referee should position at midfield to watch their sideline for roller pulls that might go out of bounds before midfield.

The Pulling Referee has responsibility for spotting the pull going out of bounds on the uncovered sideline both on the fly and on the ground until it crosses midfield. After midfield the Receiving Referee should take over responsibility for spotting the pull out of bounds. If the flight of the pull and initial position of the Receiving Referee makes this difficult, the Pulling Referee should be ready to assist by moving out towards the middle of the field and indicating with a pointed arm the approximate flight path of the disc.

4.4.4 Positioning During Play Changes

4.4.4.1 Regular Play

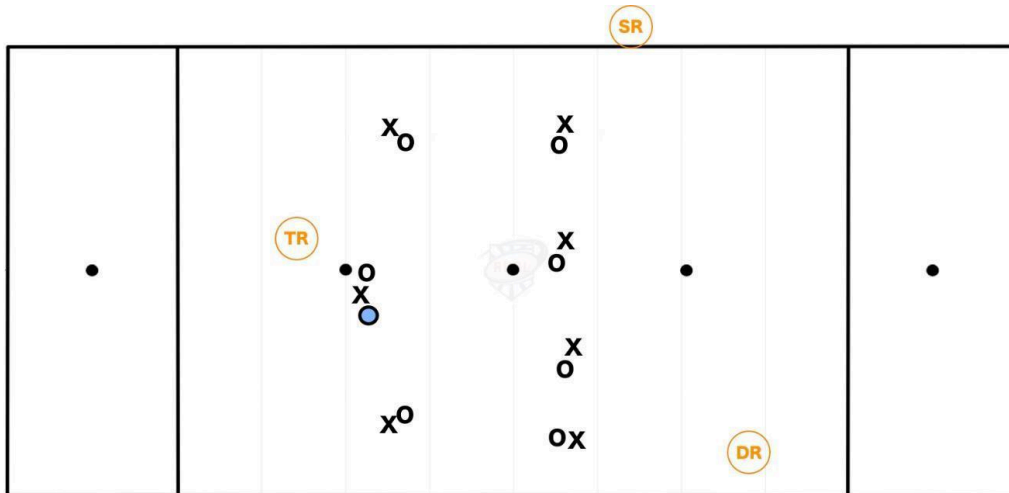

Figure 7: Positioning for the Three Person System during regular play.

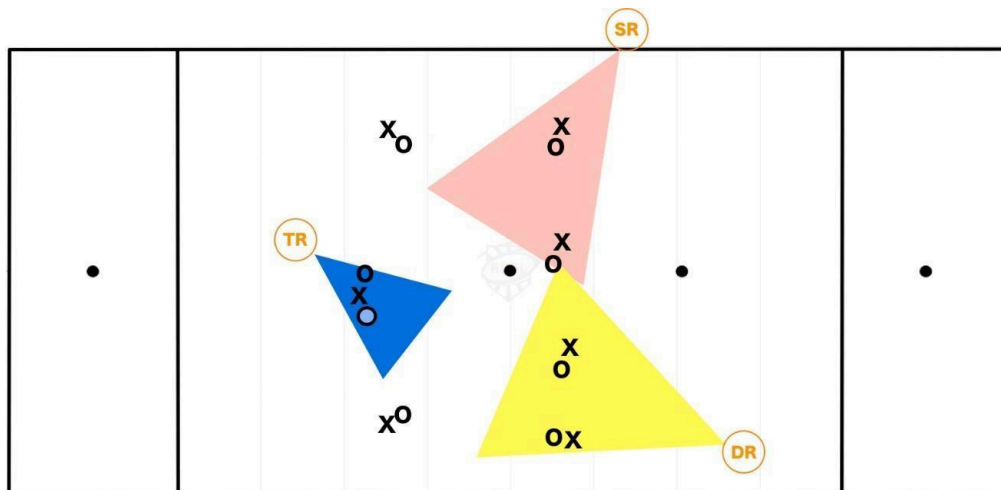

Figure 8: Ideal field of vision during regular play in Three Person System

During regular play, the three referees should work in a triangle formation.

Trail Referee - No changes except being primarily responsible for Callahan goal coverage. On a turnover they will need to quickly get over to the uncovered sideline as they now have primary responsibility for it.

Sideline Referee - All responsibilities remain the same with the exception of Callahans and off-disc handler

interactions, the latter of which will become a tertiary responsibility of all three referees. For the most part, they will position 35-40 yards downfield from the disc and focus on downfield interactions on the opposite half of the field from the Deep Referee.

Deep Referee - No changes except they should position close to the uncovered sideline as they will have primary responsibility for it. This also means they may have to focus on the disc a bit more as it approaches their sideline. If the teams are not sharing the same sideline, then the Deep Referee will also need to be prepared to grant timeouts called by the coach on their sideline.

4.4.4.2 Red Zone

Trail Referee - No changes.

Sideline Referee - Positioning stays the same, but they now are solely responsible for the entire goal line. Because of this, they may wish to come in from the sideline if the disc is over on the opposite side of the field.

Deep Referee - Should position on the exact opposite corner of the end zone from the Sideline Referee as they have sole responsibility for both the uncovered sideline and the back line. They may wish to come in from the sideline if the disc is over on the opposite side of the field for a better view of plays near the back line.

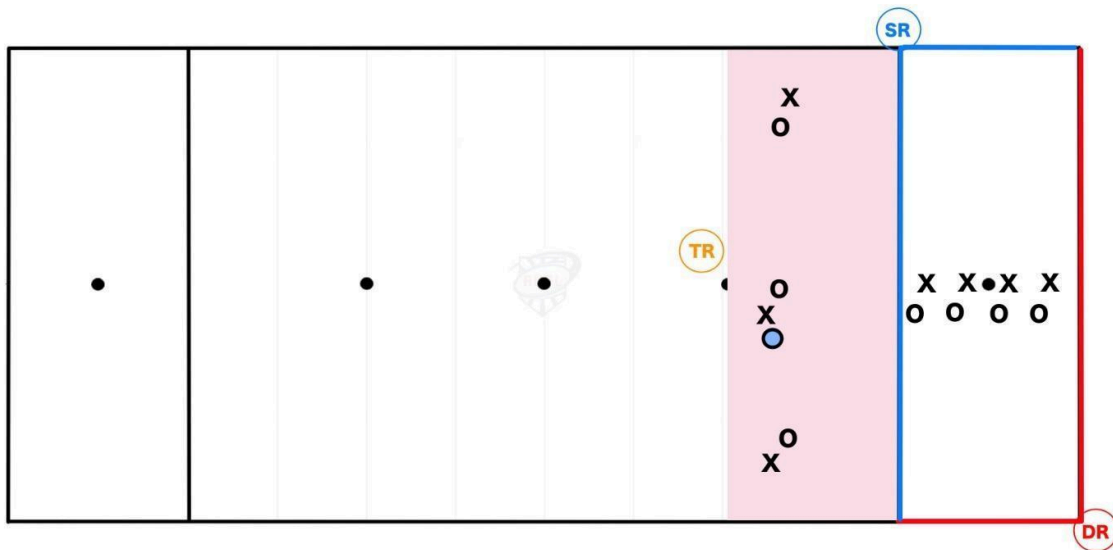

Figure 9: Positions when play is close to the end zone in Three Person System

4.4.4.3 Preparing for End of Quarter Hucks

When anticipating the end of quarter huck in a 3 person crew, the DR and TR positioning does not change. The SR starts at mid-field, and after the pull, runs to help cover the front line of the attacking endzone, while watching players for any infractions as they run down the field. The TR must cover any potential Callahan threat.

5. In or Out

It is important for all referees to make accurate line calls. The Sideline Referees (SR) will frequently make calls on the sidelines and the goal line, while the Deep Referee (DR) will make important line calls at the goal line and back line.

To ensure you have the best possible perspective:

1. Hustle to get into position.
2. Straddle the line in question, making sure to be out of the way of the play. Be close enough to the play that you can determine exactly when the catch is made, but do not be too close. If you are too close, then the angle between the location of the catch and the location of the first contact is too great to be able to see both well at the same time.
3. Look for the catch. As soon as the catch is made, sweep your eyes to find the position of the first ground contact. Remember that the sidelines are out of bounds, the goal line is not in the end zone, and the pylons are neutral.
4. Ensure that the player maintains possession through any ground contact. If possession is lost when hitting the ground, or the disc is bobbled and then caught again when out of bounds, then it is not a catch.
5. Signal the call quickly and decisively.

Remember, the first point of contact with the ground must be entirely in-bounds, or in the end zone when ruling on goals. If two players on the same team catch the disc at the same time, then consider these as one player, thus their first point of contact must be entirely in bounds, or in the end zone when ruling on goals.

It is possible for a player to jump from inbounds, catch and throw the disc before landing out of bounds, and another legal player can catch the disc in bounds. This is called a "greatest" throw. For a "greatest" throw to be legal, a player must both jump from inbounds and release the disc before touching out of bounds. If both conditions are met, then signal "in". If either condition is not met, signal "out" when the disc is touched out of bounds or the player lands out of bounds while touching the disc, respectively, and start yelling "Out" loudly. This should be loud and disruptive enough to get the attention of players and refs. Mark the spot where the disc went out of bounds so the TR and players know where the disc should come back into play. The disc needs to come back to where it went out of bounds to be put back into play, regardless of whether the disc is caught or where it lands after the attempted throw.

When the disc has gone out of bounds on a pull or on a turnover, the appropriate referee on that line needs to mark where the disc must come back into play. Ideally, they can do this by getting a disc and placing it on the appropriate spot on the primary playing field. Sideline referees can also use markers to indicate where a disc has left the playing field, especially if they need to run downfield to follow a play where the disc could come back in.

Note that if both the defense and the offense put the disc into play a few inches off of the proper spot, then let them play on so we keep the game moving. Remember that the thrower's pivot foot needs to be just inside the boundary line, not on it. If you have time, remind the thrower of this as they approach the disc.

With more discs available on the sideline, a thrower whose team just gained possession may want to grab a disc from the sideline if the previous throw went way out of bounds. In this situation, the appropriate referee must ensure that the marker is aware of the disc switch and must not allow the offense to gain any advantage from such a disc switch. If the offense attempts to use the disc switch unfairly, then delay of game is the appropriate call. The disc in play is the one to use unless it's out of play to a point where the player should grab a different one in order to avoid a meaningful delay. The referees need to manage this.

When placing an out of bounds disc on the primary playing field, remember to place it where the most recent of these events occurred:

- The disc finished crossing the perimeter line (if this in the end zone, then the disc comes in on the goal line closest to where it crossed the perimeter)
- An in-bounds player touched the disc
- A defender touched the disc
- The disc became out-of-bounds before crossing the sideline (rare, though note that hitting a scoreboard over the field would be one example).

Rule 7.2.4 states which unusual objects are considered out of bounds when contacted by a disc (stationary items), and which objects require sending the disc back to the thrower with a reset count (non-stationary items). In other words, if a thrower throws into a scoreboard over the playing field, then it's a turn and the disc is put into play where it exited the playing field. If a thrower throws and a bird, drone, or fan-thrown item interferes, then the disc is returned to the thrower and the stall is reset.

6. Timing the Game

UFA games use a running clock. Therefore, it is important to correctly apply clock rules and to keep the game moving for the teams and fans. Officials should strictly enforce time limits between points, during timeouts, and on turnovers.

During the game, the timekeeper will be in charge of the main game clock. The Head Referee should also be in a position to see the scoreboard clock during the game. If the scoreboard clock is not functioning, the Head Referee needs to keep the game time on the field. In this case, work with the PA announcer so that they announce the game time after each point and also when there is 1 minute, 30 seconds, 20 seconds, and 10 seconds remaining in each quarter or OT.

The Sideline Ref with best vantage of the clock is primarily responsible for clock corrections.

If the clock does not start on the pull or after another stoppage during play and there is >1 min left in the quarter or OT:

- Do NOT stop play.
- The SR should keep a running count of how long the clock is not running in your head. Note that the clock might start, but be delayed only a few seconds.
- If the clock discrepancy is >5 seconds, then at the next natural stoppage, such as an infraction call or a score, stop play to correct the clock. Do not stop play to reset the clock for a turnover.

If there is a clock issue and the clock is under 1 minute left in a quarter or OT:

- If the clock does not start properly on the pull, then stop play immediately. Bring teams back for a re-pull. Use time between points guidance for getting teams lined up and ready to pull, but encourage teams to not use the entire 50 seconds.
- If the clock does not start properly after a call or OB, so the clock does not start on release of the throw, then stop the game at the result of the throw. The result of the throw will stand, whether it is a turnover or a completion. Run time off the clock to adjust for how long the throw was in the air, with a minimum of 1 second being run off the clock. Since this is a technical timeout, start the clock on the whistle to restart play rather than on release of the throw.
- If the clock does not stop properly on a call or OB, correct the clock before restarting play.

If the clock is slightly above 1 minute and there is a pull that goes out of bounds, then the clock operator should stop the clock at 1:00 and start the clock on release of the first throw. If the pull lands in bounds and rolls out of bounds untouched, and the disc is not put into play by 1:00, then the clock operator should stop the clock at 1:00 and begin the clock on release of the first throw. If the pull lands in bounds and is touched by an offensive player and then rolls out of bounds, then the clock does not stop.

6.1 Quarters

The pull should occur at the scheduled game time. The home game manager is in charge of the pre-game events, including the announcing of players and the singing of the National Anthem(s). However, the Head Referee should do their best to ensure that the opening pull happens on time.

There is a time allotment of 2:30 between the first and second quarters, the third and fourth quarters, and before any overtime period. Note that the offense should signal readiness by 2:30, you do not start the 50-second pre-pull sequence at 2:30. Thus, at 1:30, both teams should receive a verbal warning that there is one minute for the offense to signal readiness, and subsequently at 1:50 both teams should receive a warning that there is one minute to pull. From there, referees should get into their proper positions and give the standard 20 and 10 second warnings that they give between points. If the game is streamed, then check with the video production crew regarding any possible commercial constraints and strive to accommodate them while communicating with the players.

Since the time between halves can vary by team, confirm before the game how long the half will be and try to adhere to it. If there's a countdown clock, aim to have the offense ready when the clock expires. You will need to wait for the game clock to be reset to 12:00 before telling the pulling team that they can pull and give the pulling team the 20 second warning. Try to keep to the times given to you before the game, making allowances for any promotional events that might be running over time. As a courtesy, give the teams five minute and one minute warnings before the second half begins.

Between the first and second quarters, the third and fourth quarters, and before any overtime period, the appropriate referees should make the following announcements at the listed times:

Time	Announcement
1:30	Any Ref: "Offense, one minute for a hand."
1:50	Any Ref: "Defense, one minute to pull."
2:10	Receiving Ref: "20 seconds for a hand."
2:20	Receiving Ref: "10 seconds for a hand."
2:30	Offense should signal readiness. Pulling Ref: "20 seconds to pull."
2:40	Pulling Ref: "10 seconds to pull."
2:50	<i>Pull should be away.</i>

For halftime, the following announcements should be given at the listed times (assumes a 10-minute halftime):

Time	Announcement
5:00	Any Ref: "Offense, five minutes for a hand." <i>(Optional)</i>
5:20	Any Ref: "Defense, five minutes to pull." <i>(Optional)</i>
8:00	Any Ref: "Offense, two minutes for a hand." <i>(Optional if the 5 minute warning was given)</i>
8:20	Any Ref: "Defense, two minutes to pull." <i>(Optional if the 5 minute warning was given)</i>
9:00	Any Ref: "Offense, one minute for a hand."
9:20	Any Ref: "Defense, one minute to pull."
9:40	Receiving Ref: "20 seconds for a hand."
9:50	Receiving Ref: "10 seconds for a hand."
10:00	Offense should signal readiness. Pulling Ref: "20 seconds to pull."
10:10	Pulling Ref: "10 seconds to pull."
10:20	<i>Pull should be away.</i>

6.2 Points

Once a point has been scored and signaled, the Referee(s) keeping time should immediately start the stopwatch. Refer to Section 4.1.1 for pre-pull formation and timing signals.

The purpose of the timing is to keep the game moving quickly. By making visible signals to the players and on-field referees, the officials ensure smooth communication between players, sideline coaches, and other referees.

In between points, make the following announcements at the listed times:

Time	Announcement
:10	Receiving Ref: "20 seconds for a hand."
:20	Receiving Ref: "10 seconds for a hand."
:30	<i>Offense should signal readiness.</i> Pulling Ref: "20 seconds to pull."
:40	Pulling Ref: "10 seconds to pull."
:50	<i>Pull should be away.</i>

6.3 Timeouts

During most of play, only the player with the disc and a proper pivot, or the Designated Coach of the player with the disc and a proper pivot, may call a timeout. Immediately after a turnover, the Coach or any player on the team about to pick up the disc may call a timeout once the disc becomes out of bounds or comes to a rest on the entire playing field. Sideline Referees need to be aware that a timeout call could come from the designated timeout coach at any time. The Designated Coach is the only team member allowed to leave the players' box so long as they're doing so for the purpose of calling a timeout.

In between points, any player or coach may call a timeout until the pull occurs.

Each team has two timeouts per half. Timeouts are 60 seconds in length. If Overtime is necessary, each team gets one timeout in each Overtime period. Timeouts do not carry over. A team cannot call two consecutive timeouts. Some amount of play must occur before another timeout can be granted. This can be as brief as restarting play after a timeout, even if only one second of the stall has been counted. A throw does not have to occur to call a second timeout.

While not mandatory, team coaches can elect to throw a pre-approved flag onto the field of play in their effort to get the attention of the Officials of their desire to call a timeout. This does not replace any other method of notification to Officials; rather, it is an option coaches can use in addition to all previously approved methods.

Play continues when a player or coach is signaling and calling timeout until the Referee recognizes the timeout. The Referee can point to the player or coach or otherwise let them know that the timeout is recognized. There may be a delay between recognizing the Timeout and blowing the whistle. If there is a turnover or other event during this time, the disc will go back to where it was when the Referee recognized the timeout.

During timeouts, the Referee keeping time should begin timing the moment the timeout is recognized. If you will be fixing a clock malfunction, inform the teams of what the new time on the clock will be, then start the timeout clock after both teams have become aware.

Teams tend to know that offense can sub for the first 30 seconds and defense must complete subbing by 50 seconds. Keep an eye on teams. Note the below announcements that are optional, based on if the team has clearly finished subbing and does not require the warning. The onfield ref, or ref closest to the majority of players, should make the following announcements at the listed times:

Time	Announcement
:20	"Offense, 10 seconds to sub." <i>(Optional)</i>
:30	"Offense, no more subs, only seven players and coach on the field." <i>(Optional)</i>
:40	"Defense, 10 seconds to sub." <i>(Optional)</i> "20 seconds left in timeout" (Show double fist hand signal. Other refs can mirror.)
:50	"Defense, no more subs, only seven players and coach on the field." <i>(Optional)</i> "10 seconds left in timeout" (Show single fist hand signal. Other refs can mirror.)
:55	"Timeout over, play coming in five, four, three, two, one." <Whistle to restart play>.

If a timeout is called between points, it simply adds 60 seconds to between point timing (time between points is then 110 seconds). In this situation, make the following announcements at the listed times:

Time	Announcement
:30	Any Ref: "Offense, one minute for a hand."
:50	Any Ref: "Defense, one minute to pull."
1:10	Receiving Ref: "20 seconds for a hand."
1:20	Receiving Ref: "10 seconds for a hand."
1:30	<i>Offense should signal readiness.</i> Pulling Ref: "20 seconds to pull."
1:40	Pulling Ref: "10 seconds to pull."
1:50	<i>Pull should be away.</i>

Officials can restart play early if both teams are ready to resume play before the end of the timeout. Be mindful of media, however, which may require enforcing the full timeout to show an ad or highlight package.

If a coach elects to call a timeout in between points, the 60 second timeout is added to the existing time between points. The time between points does not restart. Therefore, if a coach waits 30 seconds after a score to then call timeout, they will get 60 seconds for the timeout and the remaining 20 seconds, meaning the total will be 80 seconds before the next pull from when the coach asked for the timeout.

6.4 Injury Timeouts

Officials should err on the side of assuming a player is not injured and is able to continue play. If an official calls a play dead due to a player appearing injured, then the player must follow appropriate guidelines for either rejoining play or taking a sub. If a player appears injured, whistle the play dead and double cross your arms over your head once there is possession of the disc, or once an imminent scoring opportunity has passed, so long as the injured player was not involved in the play.

Play restarts where the disc was when the official recognized the injury, not necessarily when the whistle blew.

6.4 End of Quarter Considerations

It is good practice for the referees on the field to communicate to each other when there are less than 60 seconds left in a period of play with verbal communication and by holding up an index finger.

6.4.1 The clock in the last 60 seconds of any period

In the last 60 seconds of any quarter or overtime period, the clock no longer starts on release of the pull. On a pull, the clock starts when:

- The in-bounds disc is touched or caught by an in-bounds player on offense
- If the disc goes out of bounds untouched by the offense, then clock starts on the release of the first throw

In the last 60 seconds of any quarter or overtime, the clock stops on every foul, stall, travel, or other infraction. The clock does not stop for a generic turnover where the disc stays in bounds.

When an infraction occurs or the disc becomes out of bounds, blow the whistle twice and x-wave to stop the clock. If these occur outside of 60 seconds, but during enforcement the clock hits 60 seconds remaining, then stop the clock at 60 seconds, with the clock restarting as per below.

6.4.2 Restarting the clock in the last 60 seconds of any period

Please note that the following applies only to fouls, stalls, travels, discs that become out of bounds during play, team timeouts, and pulls that land out of bounds or land in bounds but then roll out of bounds before being touched. Injury or referee timeouts, and pulls that are first touched in bounds, are played as normal.

The game clock does not start until the first throw is released. Blow your whistle to start play and the stall count. Keep your hand raised in the air to signal that the game clock is not to start yet. If you get to five in the stall count, chop your free arm as you normally would. Once the first throw has been released, circle your arm per the “start the clock” motion to resume the game clock. Note that a stall does not involve releasing the disc, so the clock would remain stopped on the turnover until somebody releases a pass.

Note that there should be a whistle to restart play for an out of bounds disc. Do not hold the whistle while you get into position. This whistle should come as soon as the official sees that the offensive player has the disc and a proper pivot.

6.4.3 Defensive fouls with the clock expiring

Per Rule 14.4.3, if a defensive foul occurs when time has expired with the disc in the air, the offense is entitled to one untimed throw. When the thrower has the disc and a proper pivot, whistle for play to begin and start the stall count. Upon the result of the pass, the quarter is over; unless there’s another defensive foul. If the thrower is stalled, then the period ends.

6.4.4 The end of quarter MAC

Any throw that is in the air when a quarter expires is still in play. No other throws are permitted, regardless of the existence of a pivot. A player cannot catch and release the disc in the air and have that count as a continuing action. However, tipping a pass is not considered a throw, thus teams can continue tipping the disc to teammates in an effort to score. Remember that purposeful tipping to yourself is a travel. Ensure that they are MACing the disc and not performing a catch-and-throw move.

6.5 Other Timing Notes

Referees are able to stop the game clock for any administrative purposes, such as referee conferences or clock issues. They can also stop the clock when players are clearly wasting time so that they can assess a Delay of Game penalty and not provide the offending team with a reward for their actions.

When a foul for an Unsporting Act is issued, the referee should double X wave to stop the clock. For Flagrant or Technical fouls, communicate to the head ref, player, and both coaches who received the foul and a quick reason why, such as taunting or dangerous play. Allow time for the SR with the scorecard to note player team, number, and game time so that the Unsporting Act can be reported by the Head Ref in the game report. Assess the yardage penalty. All of this communication and recording is done with the clock stopped, so be deliberate to properly manage the assessment, but make sure to hustle so that the game can continue. Once the game is

ready to restart play, the TR will whistle and wind their arm, or if under 60 seconds, whistle and wait for release of the disc to wind the arm to start the clock.

If the referee thinks that the Unsporting Act merits a straight ejection, then double X wave to stop the clock. Conference with the other referees to discuss before deciding on a straight ejection or just a Flagrant/Technical foul.

Flagrant and Technical fouls are the only fouls tracked during a game for each player. If a player receives 2 Flagrant Fouls or 2 Technical Fouls, then they are ejected. A player may receive 1 Flagrant foul and 1 Technical foul and continue playing in the game.

7. Stalls

7.1 The Pre-Stall

Because the clock continues to run on turnovers, enforcing the pre-stall is important not only to keep the game moving, but to ensure teams are not wasting time unnecessarily. When a disc hits the ground and stops moving, the Trail Referee (TR) should begin the 10 second pre-stall as soon as the disc has completely stopped. If a huck lands deep in the end zone, and no player or ref is close by, then the TR may take a few moments to get in position and then begin the 10 second pre-stall.

If the disc is out of bounds, the closest referee should get a disc from a Disc Runner and place the disc on the primary playing field (just inside the sideline) where the disc will come into play. The 10 second pre-stall begins when the disc is placed on the primary playing field. If there is no disc to place and the player goes to retrieve the out of bounds disc, then begin the 10 second pre-stall once the player has picked up the disc. This prevents a player from gaining an advantage by taking extra time to return to the field.

Note: If an offensive player is waiting for the disc at the proper spot, you may hand the disc to them instead of putting it down at their feet.

The TR will count and use the arm chop to signal that the pre-stall is being counted. The TR will also give verbal warnings and hand signals at 10 seconds (single fist), and five seconds (open hand showing five fingers). They should also count down “three, two, one” if the pre-stall gets that low. If the offense has not picked up the disc to put it in play at the end of the pre-stall, the TR will announce, “Stalling,” and begin the silent stall count immediately if there is a defender within three yards of where the disc can be put into play. If the disc is lying in the end zone and the pre-stall has expired, then begin the Stall Count if there is a defender within three yards of the disc. Even if the offense picks up the disc to walk it to the goal line, continue the stall as long as the defender is making an effort to stay with the player and disc.

7.2 The Stall

In professional games, the stall count is seven seconds and is kept by the TR. When an offensive player takes possession of the disc and a marker is within three yards of that thrower, the TR announces “Stalling.” This is important so that the thrower knows when the count has begun. The TR should not begin the stall count until a catch is complete, so there is no stall while a player is bobbling for control during a catch. A thrower does not need a pivot, though, for the stall count to commence. For the first four seconds of the stall, the TR keeps the count silently and gives no signal. For stall counts five, six, and seven, the TR chops their right arm out in one second intervals and loudly announces the counts of five and six. If the thrower has not released the disc at the count of seven, whistle play dead immediately (do not delay the whistle to announce “Seven”). After the whistle, announce, “Stall,” and signal by tapping the top of your head. Referees should make all stall related calls verbal calls during live play (i.e. “Stalling,” “Five,” and “Six,”) loud enough for the thrower and marker to hear. However, the stall count is to be enforced accurately whether or not the players heard the call. If no throw has been made, then instruct the thrower to place the disc on the ground. If a throw has been made, then retrieve the disc and place it at the spot of the thrower’s pivot. There is no advantage on a Stall. Once the disc is in an appropriate spot and all officials are reasonably in position, the new TR (previously the DR until the turnover) will whistle to restart play.

Other specifics of the stall:

- If the marker leaves the three yard radius around the thrower, the TR announces “Reset” and signals by extending both arms to their side with fists, and resets the count to zero. The count does not start again until a marker re-enters the three yard radius. The referee should also hold the “reset” signal if there is no stall count.
- The count begins immediately when the thrower has possession and a defender is within three yards. The count still begins and continues even if the thrower is initially on the ground due to a layout or their momentum on the catch carries them out-of-bounds and they must return to in-bounds.

- A double team is considered as one marker. One member can leave the double team and the count continues as if a marker is still there. Also, if defensive player A is the initial marker and defensive player B joins the mark to create a double team, player A can leave the three yard radius and the count will continue so long as player B remains as a marker.
- Defensive fouls, double fouls, and integrity calls reset the stall count. Offensive fouls do not. The stall count is reset on all timeouts, including team, injury, and technical timeouts.
- If the thrower commits an offensive foul after stall six and the offense retains possession, then place the disc at the spot of the thrower's pivot, (verbally tell the thrower/marker), signal the initial foul and then a stall, and enforce only the stall. If players ask because it seemed fast, just say "The offensive foul by the thrower occurred after stall 6, therefore by rule this is a stall/turnover."
- If there is an offensive foul away from the thrower, then the disc is put back into play with stall reached + 1, and a maximum stall count of 6. There is not an automatic stall and turnover for an offensive foul away from the thrower.

8. Travels

All travel violations are part of the same category of foul, and carry a 10 yard penalty. Referees only need to call these violations a travel without the thrower/receiver specification. These are only here to outline the different enforcements of the 10-yard penalty.

8.1 Thrower-type Travels

Once a thrower has established a legal pivot, they are subject to a travel violation. If the pivot foot moves sufficiently (see guidelines below) before a throw is released, call a travel. This will usually come as a result of a foot drag before the release of a long huck or pivoting away from a defender. The 10 yards will be enforced from the spot of the original pivot. Remember, a foot drag is fine AFTER the disc is released, just not before. Referees should make sure that there is sufficient pivot movement to justify the call. As a guideline, if the pivot moves more than three inches, OR if the thrower is gaining an egregious advantage with less than three inches, call this a travel. There should rarely be a travel on a slip or a wild pivot, and most calls should come on an actual throw. If it's less than three inches, and it doesn't affect the throw or gain an advantage, let it go.

Remember to apply Advantage on thrower-type travels. Raise your hand when seeing a travel on a throw instead of automatically blowing your whistle so that you can see the result of the play. If the result of the play is a turnover, then give the "play on" signal. If the result of the play is a completion, blow your whistle immediately to bring the disc back. Being loud on the whistle is especially important if the catch was for a goal, since players may think there is a score and not an infraction call.

8.2 Receiver-type Travels

Before establishing a legal pivot foot, a new thrower is subject to a travel violation. These travels are typically the result of taking too many steps, changing direction, accelerating after catching the disc, or establishing a pivot foot in an incorrect spot. The 10 yards will be enforced from the spot where the pivot should have been. Take care not to whistle the infraction too quickly (use Advantage) in case the new thrower immediately throws the disc since there is the possibility of a turnover.

It is also a receiver-type travel if a new thrower establishes a pivot in an incorrect spot. Try to manage this by verbally telling players where the appropriate pivot spot is. If the player does not correct their pivot within 2 seconds, or if they throw before correcting their pivot, whistle and call a travel. You should not wait for the throw to call the travel.

Examples of this include:

- The receiver catches the disc outside the end zone and their momentum carries them in. If they do not move to the goal line within a second and instead start looking for a receiver or pivoting with their foot inside the front goal line, then they have set an illegal pivot.
- The receiver's momentum carries them out of bounds at a certain spot, and they:
 - bring the disc back to the field at a substantially different spot, typically about 1 foot or more from the appropriate location
 - set up a pivot that is clearly outside of the playing field perimeter. This means the pivot foot is outside of the out of bounds line.
 - bring the disc back to the field at an incorrect location and gained an advantage by setting up in an incorrect location, such as being further away from the mark
- A pivot is required by rule at a specific spot (where the disc lies, where it went out of bounds, etc.) and the thrower places a foot at the correct spot but pivots off the other foot which is at a different spot. This example of an illegal pivot is more common with lefties or for quick left hand breaks.

Referees may want to give the players some allowance for slippery turf, especially in wet conditions as players will fall much easier. The refereeing crew should determine the level of tolerance before the game and communicate this to the teams at the pre-game meeting.

When there is a big change in direction after the catch but no defender in the area, referees should call the travel. If a player makes a move that is clearly a travel, regardless of a defender in the area, the offense has gained an advantage.

Players are entitled to stand up after making a diving catch without being called for a travel. This does not apply, however, to a player who loses their balance, say on a big fake or pivot. In this case, the player does not get a free "stand up" and could be subject to a travel.

Note that in professional games, ground taps and defensive checks are never required. A thrower simply needs to place their pivot at the proper spot before throwing, unless the rules require a whistle to restart play, then the thrower must wait for that whistle (with no check required).

Travel rules can apply any time that a player takes possession of the disc. A catch beforehand is not required to be subject to travel infractions. A player picking up a rolling pull or turnover and taking a couple of extra steps due to momentum is a specific example of this since they're required to put the disc in play where they picked up the disc.

9. Fouls

9.1 Thrower/Marker

9.1.1 Contact

It is imperative for referees to watch thrower-marker interaction as defensive players try to push the boundaries of legitimate marking. At the same time, crafty throwers will also look to take advantage of aggressive marks and look for easy yards and reset stalls by drawing contact.

An illegal mark is defined by a line drawn between any two points on the marker being less than one disc space away from the thrower's torso or pivot foot. Any contact that occurs between the marker in this restricted area and the thrower or the possessed disc is a foul on the marker since they were in an illegal marking position, unless the contact is solely and aggressively caused by the thrower. If the thrower aggressively initiates contact with an illegal mark using a non-natural motion, such as pivoting hard into the marker's torso or pushing the marker with the disc hard, the Trail Referee (TR) should call contact against the thrower. Contact on the thrower in this situation will send a message that the thrower cannot just go looking for hard contact unnecessarily.

If the marker is in a legal position, then referees will need to observe how the contact came about and who initiated it. If the thrower pushes or pivots into the torso of a legally positioned marker, then this should be called as contact on the thrower. If the contact is with the marker's arms or legs, then it is almost always a foul on the marker unless they are perfectly still, which is extremely rare.

With this call, you'll need to use your best judgment as a referee, and to try and put yourself in the best position to see any potential fouls.

9.1.2 Triple Team

The standard for a triple team is similar to the double team in club, with the obvious difference that it involves three defenders instead of two. A third defender is allowed to be within the 3-yard radius of the thrower if they are guarding (within 3 yards and reacting to) another defender, or if they are just running through the area and not intentionally interfering with throws. Use your best judgment here, as it is usually easy to tell when a third defender starts "guarding" the thrower. These fouls typically happen either with an over-aggressive cup in a zone defense, or in a double team situation where a stray defender is brought into the area. Note that a catch in traffic that results in three defenders being around the new thrower, or a new thrower picking up a disc in a crowd is not grounds for a triple team call, as the defense should be given a chance to rectify the situation.

9.1.3 Vision Blocking

A defender is not allowed to intentionally block the thrower's vision. This should never be an issue as that is typically a move you do not see from experienced players.

9.1.4 Travel

When watching thrower-marker interaction, do not forget to watch for travels as well.

9.2 Receiver/Defender

9.2.1 Pass Interference

Once the disc is in the air, quickly identify the intended target(s) and watch them as we have now moved from potential contact infractions to pass interference. Once in the air, anyone has the right to make a play on the disc without being interfered with, and any contact that affects a player's ability to make a catch is pass interference. This call can be made even when the receiver is in the air and would not come down in bounds, even without the contact, if they have any reasonable chance to attempt a "Greatest" play.

Note that boxing out the opponent with the body (when the player has established legal position and is making a play on the disc) is not a foul. Look for grabbing, pushing, climbing over another player, holding down or swiping at hands or arms, the use of elbows, or tripping. Insignificant jockeying for position on a floating disc is not a foul. Since the penalty is getting the disc at the spot of the foul (which is also a turnover if the foul is called on the offense) plus 10 yards, use your best judgment in determining if the infraction justifies the call. For example, if one player trips an opponent, then it is pass interference. If the trip seems deliberate, then it is pass interference and a Flagrant foul. However, if both players trip over each other or both players are aggressively playing each other, you have the option to call a double foul, which sends the disc back regardless of the outcome of the play.

If offensive pass interference occurs in the attacking endzone, the result is a turnover and the disc comes into play with the fouled defender taking possession at the spot at the front of the endzone closest to where the foul occurred + 10 yards.

Be aware of when to call Pass Interference versus Contact calls. If the disc is not in the air when the illegal contact occurs, then it is a Contact call. Offensive Pass Interference occurs when the illegal contact directly affects the defender's opportunity to make a play on a disc in the air. Offensive contact occurs away from the disc and with no opportunity to make a reasonable play on a disc in flight, or if the contact occurs while the disc is not in the air.

9.2.2 After-Catch Contact

If the receiver has successfully made a catch, and the defender's layout D bid results in significant contact with the new thrower, then this should be called as contact. If the thrower stays on their feet, use Advantage as this aggressive bid may have put the defender out of position, and the thrower may want to take advantage of this with an unmarked throw. If the thrower is knocked down by the bid, immediately call a contact foul. While we want players to make big plays on the disc, they must be clean attempts, as we do not want players getting hurt on potentially reckless challenges. Plus, by rule, the stall count must start when the catch is made, and it is not right to lose two to three seconds on a seven second stall count when taken down by the defender.

If the receiver has successfully made a catch, and a defender's contact causes them to land out of bounds or out of the end zone, when in your judgment they would have landed in the end zone or in the primary playing field without the contact, a Force Out should be called and possession or a goal awarded. If the receiver would not have landed in bounds, even without the contact, but the subsequent contact from the defender interferes with any reasonable chance to attempt a "Greatest", then this call should still be made.

9.2.3 Strip

The key to remember with a strip is that the receiver must have sustained contact and control of a non-spinning disc to have possession. Without possession, no strip can happen. If the receiver has successfully made a catch, but a defender's contact causes the disc to be dislodged, then possession should be awarded to the fouled offensive player. If this occurs in the end zone, a goal should be awarded. For strips outside the endzone, the offense maintains possession, plus they advance the disc 10 yards or centered on the goal line if within 10 yards of the attacking goal line.

9.2.4 Away from the disc

If you are the Deep Referee (DR) or a Sideline Referee (SR) on the break side, do not get caught disc watching. Keep an eye out for obstruction-type fouls like excessive hand checking, push offs to get open, shirt or person grabbing, and anything else that goes beyond what is allowed in a non-contact sport. Note that two players vying for the same position away from the disc is incidental and should not be called, unless it is significantly affecting someone's ability to make a play, get open, or get into a defensive position. Any fouls away from the disc should be called as contact.

9.2.5 Picks

Picks are difficult to call by nature. Fortunately, many teams run horizontal stacks on the large field, resulting in less opportunity for picks. Still, it is an infraction that must be called. Picks in the middle of the field are mainly the responsibility of the DR as they will have the best angle. This is why the DR should be watching the disc as little as possible. Picks near the sidelines are less frequent, but the SRs should still be keeping an eye on these as they look for other infractions. In particular, the deep SR should be helping the DR with downfield picks. Picks around the thrower and marker should be called by the TR, with help from the near SR.

When looking for a pick, your eyes should gravitate towards any area with more than two players. If an offensive player cuts towards another pairing, and the defender either makes contact with either player in that pair, or has to slow down or adjust their path to avoid a collision, that is a pick, so long as they were within 3 yards of the player they were guarding. Remember, a defensive player can be picked by their own teammate, so long as a defensive player does not intentionally move in a way that causes a pick.

Keep an eye out for offensive structures that seem to deliberately create picks around the handlers, off of a dead disc, or red zone situations. If there seems to be a pattern, proactively communicate with the coach. If the behavior continues, it's a Flagrant foul.

When calling a pick, remember to apply Advantage as described in Section 10.

One difference from the pick rules of club is that a stationary defender loses certain rights when it comes to being picked. 13.2.6.1 states "An offensive player may be as close as possible in front of or to the side of a stationary defender if contact is not made. This is not a pick, as the defender can avoid the offensive player." However, 13.2.6.2 states, "An offensive player must allow a defender the space to take a reasonable step backwards without contact, or it is a pick." Essentially, this means that if a defender is not moving (e.g., in a set vertical stack), then they cannot be picked by an offensive player that they can see. This rarely happens, but it is something to remember.

9.3 Unsporting Acts

Unsporting Acts include Flagrant Foul and Technical Foul calls and are appropriate for unexpected unsportsmanlike behavior. This is a flexible call that can be appropriate for numerous unusual situations. If a player accrues 2 Flagrant Fouls or 2 Technical Fouls, then they are automatically ejected. A player may accrue 1 Flagrant Foul and 1 Technical Foul and remain in the game.

Although uncommon, it is possible that a first Flagrant or Technical foul merits a straight ejection. Fighting, throwing punches, throwing an item from the sideline to prevent a score, or use of derogatory language towards someone on the opposing team or referee crew should cause the player to be ejected. Egregiously dangerous plays or egregious fouls, such as sideline tripping or hugging a receiver in the endzone, may result in a straight ejection after consultation with the entire referee crew. Derogatory language towards an opponent or ref can result in a straight ejection, while disrespectful language, taunting, or loud cursing at an opponent or ref tends to result in a Technical Foul rather than a straight ejection. Before any ejection, conference with the referee crew to verify that the action escalated to the level of a straight ejection.

For most cases, there is no need to give a warning prior to issuing a Flagrant or Technical call. A Flagrant or Technical call after the first instance of inappropriate behavior helps establish the referee's authority and encourage fair play.

Keep in mind that a brief (1-2 seconds, one throw, or the end of an imminent scoring opportunity) advantage may be played if an Unsporting Act has occurred. However, this cannot result in an unlimited "play on" situation. When the advantage expires, play should be stopped to assess the 20-yard penalty and potential ejection. The yardage penalty is enforced from the spot of the result of the advantage play or the spot of the foul, whichever is more advantageous for the fouled team. If the defense commits an Unsporting Act and the result of the advantage is a goal, the goal stands and the yardage penalty is enforced on the next pull.

Flagrant Fouls are for plays that go above and beyond a typical foul. Examples include but are not limited to:

- aggressive or dangerous contact
- marking in a way that the thrower cannot possibly throw, i.e. egregious wrapping, or grabbing by an overcommitted defender as they run by
- grabbing a receiver so they can't make a play on the disc
- repeated fouling on the mark or in the stack downfield

Technical Fouls are for behavior unbecoming to the sport of ultimate and include but are not limited to:

- taunting an opponent, including spiking the disc towards them
- loud cursing at or disrespecting an official
- the sideline counting down the wrong clock count at end of a quarter or OT

Note that if a referee observes a pattern of repeated infractions, it is better to try and manage this by talking to the players or coaches before giving a Flagrant foul.

Technical Fouls can also extend to more major delay of game tactics, or after repeated delay of game fouls. Minor delay of game tactics like not immediately dropping the disc on a stall or thrower travel, or kicking the disc away from a thrower may not necessarily warrant an immediate Technical foul, and you will need to use your judgment. Using delay of game for some of these minor acts may be more appropriate unless they are egregious, or they continue to occur after repeated warnings. See the following section for further guidelines on this.

After signaling a Flagrant or Technical foul, **stop the clock** and make sure the referee with the scoresheet takes the time to record the time of the foul, the player's number, and the nature of the foul. This must be done so that the information can be accurately logged in the Head Referee's game report to the league. It also serves as a more physical indication that a foul of significant consequence has occurred. Inform the coach of both teams of the player(s) who received the foul(s). Assess the yardage penalty and then restart play.

A team can never benefit from committing an unsporting act on a specific play, regardless of the outcome of that play. For example:

- A bid where the D player gets the disc first but then creates excessive contact. Offense will retain the disc and be awarded 20 yards.
- An offensive player completes a catch, but in the act commits a Flagrant foul on a defender (in the course of making the play, not taunting after the play is determined). This is an incomplete pass and a 20 yard penalty.

A Flagrant or Technical foul is the only foul that players may not use Integrity to remove the call.

If a palpably unfair act occurs while a player is attempting to make a catch in the endzone, then a Flagrant Foul should be assessed, and a goal can be awarded. Only award goals for plays that unquestionably cause a player to not catch a clearly catchable score.

9.4 Delay of Game vs Technical Foul

In essence, the line between Delay of Game and Technical Foul comes down to the degree of disruption caused by the player's behavior. Here are some examples:

If a frustrated player takes out issues on the disc **during play**, such as after a stall or turnover:

- it will be treated as Delay of Game if they spike or kick the disc a sufficient distance to delay play, and the disc is not warped
- it will be treated as a Technical Foul if they throw or kick the disc a significant distance, or if they damage the disc to a point where a new disc is required

If a player with the disc argues the call instead of placing it on the ground:

- it will be treated as Delay of Game if the complaint is minor and does not last more than a few seconds
- it will be treated as a Technical foul if the complaint is major, demonstrative, or lasts more than a few seconds

If a player asks an opponent to use the Integrity Rule, there is no penalty if the request is quick and singular. If the request goes beyond this:

- it will be treated as Delay of Game if the appeal causes a notable break in the game
- it will be treated as Technical foul if the appeal is belligerent or if the appeals are repeated in that instance or throughout the game.

If a player intentionally impedes another player attempting to pick up or appropriately move the disc by standing on it, blocking it, or blocking the player, it will be treated as Technical Foul in all instances.

If a player or coach gets in a referee's way due to being out of the players' box, it will be treated as a Technical foul in all instances, except when the coach is out of the box trying to get the attention of the referees for a timeout.

9.5 Double Fouls

Double fouls always reset the stall count.

Double fouls should be called when there are simultaneous fouls committed by members of both teams on a single play or when there are two unrelated fouls during the same general play. This would include situations like two downfield players engaging in hand-checking, two players fouling each other going for a disc when it's not clear that one initiated contact over the other, or a thrower pushing off of a marker who is in an illegal marking position.

If one infraction causes another, however, this is not a double foul. For example, a foul by a marker on a thrower that causes the thrower's pivot to move is only a foul on the marker and not a foul/travel like you sometimes see called in club ultimate. If a defender chasing a cutter gets picked by the thrower and results in an unavoidable collision, this is a pick on the offense and not a contact foul on the defender since the pick caused the contact. However, an unrelated infraction like a triple team does not give the thrower impunity to travel. You must call whichever infraction happened first in these situations.

10. Advantage

When the whistle blows, players are conditioned to stop play and see what the call is. In some situations, this could end up actually benefiting the offending team, so referees need to be aware of these potential scenarios and delay their calls briefly. Some examples include, but are not limited to:

- Travel during the throwing motion and the disc is not caught
- Contact call on the marker but the thrower had a quick follow up pass available
- Pick called downfield but the throw is not caught.
- Foul on the throw that is caught by the receiver anyway. The whistle stops offensive flow in what should have been a “play on” situation.

In situations with potential continuing action, the referee should refrain from blowing the whistle for a couple of seconds until they sense they will not disadvantage the offended team with a whistle. The referee should instead hold their whistle, immediately raise their hand in the air (similar to a delayed penalty in hockey), and have the whistle close to their mouth. Once the advantage is over (e.g., the offense does not have another readily available pass if the call is on the defense, or the offense retains possession if the call is on them), the whistle can then be blown and the penalty enforced. In other words, if the offended team ends up with a better result despite the foul (offense retains flow or has a big gainer, or defense gets the turnover), then the referee should extend both arms in front of them with palms face up. When time allows, announce “Play on”. Sometimes, especially for the Trail Ref, the “Play On” announcement is skipped since the TR is already beginning a new stall count.

Once the whistle is blown, play is dead.

Advantage applies to goals as well, so that any defensive foul committed on a throw or reception where a goal is scored anyway results in a “play on” situation and the goal stands, with no yardage being enforced unless an Unsporting Act occurs.

Advantage should only be given for one second maximum or only one throw.

If you’ve made the decision to blow the whistle and a throw is made while whistling, simply communicate to the players that the advantage period had ended and the throw is moot.

Some more specific guidelines:

Marker Contact with the Thrower

The Advantage here is one throwing motion or one second if the thrower was not in a throwing motion. If the thrower is fouled on the pivot, does not release the disc, and then pivots another way or comes back to a neutral position, the Advantage is over. Advantage is also over if the thrower does not release the disc but holds that position for another second while looking for another throw. Note that this can also apply when the foul is on the thrower.

If a throw is released during Advantage, Advantage continues until the result of the play is determined. If the offended team benefits (pass is caught by the receiver if marker committed the foul, pass is not caught if thrower committed the foul), then signal “Play on” with both arms extended and palms up, and play on. Otherwise, whistle play dead, enforce the appropriate penalty, and restart play when appropriate.

Travel

The Advantage here is one throwing motion or one second if the thrower was not in a throwing motion. If the thrower does not release the disc after making a throwing motion (or holds the disc for one second), the Advantage is over. If a throw is released during Advantage, Advantage continues until the result of the play is determined. If the disc is caught, whistle to stop play, bring the disc back to the thrower, enforce the 10 yard penalty, and then whistle to restart. If the disc is not caught, then signal “Play on” and continue play. Any Travel should have this Advantage period, do not automatically blow the whistle in this case.

Pick Called Downfield

Upon seeing a Pick, the referee making the call should put their hand up, and then look at the thrower to see if they are in a throwing motion or if the disc is already in the air. From this point, the Advantage is one throwing motion, or one second if the thrower was not in a throwing motion. If a throw is released during Advantage, Advantage continues until the result of the play is determined. If the disc is caught, whistle to stop play, enforce the 10 yard penalty from the location of the thrower (if the pick affected play) or the receiver (if the pick did not affect play), and then whistle to restart at the appropriate time. Remember, if a goal results from a pick that did not affect play, then the goal stands.

If the disc is not caught, then signal “Play on” and continue play.

Any Pick should have this Advantage period, so do not automatically blow the whistle unless the thrower is not in a throwing motion, or until the result of the throw.

Pass Interference

Do not immediately whistle Pass Interference as the receiver might make the catch anyways, or a teammate might come in and make the catch. In this case, the offense would likely prefer continuing action. In this case, Advantage is the period between the foul occurring, and the result of the play. If the offense maintains possession on Defensive Pass Interference, or the defense gains possession on Offensive Pass Interference, then signal “Play on” and continue play.

After Catch Contact

If a receiver (now the Thrower) stays on their feet after post-catch contact, there are actually two periods of Advantage. The first is an unlimited Advantage, which is from the time of the catch to the time the thrower regains their balance from the contact. Any throw during this time is a related foul on the new marker and thus subject to the same Advantage as Marker Contact with the Thrower, provided the throw is legal (eg. Not a Receiver Travel).

After this, there is a limited Advantage period of one throwing motion or one second AFTER they have regained their balance from the contact. If no throwing attempt is made during this limited Advantage, then whistle to stop play, enforce the penalty for post-catch Contact, and then whistle to restart.

Fouls on a Dump Cut or a Dump Throw

If a receiver is cutting for a dump and is fouled, or if a thrower is fouled on a backwards throw, you will need to exercise more judgment in determining whether to play on or to send the disc back to the thrower and give them the yards. Consider the yardage lost, side to side positioning, and whether there’s a good continuation throw, and then make the judgment that would most favor the offense.

Flagrant Fouls

A “play on” situation does not absolve a player from getting booked for more severe fouls that would have received a Flagrant Foul. In this case, Advantage can be extended if there is an imminent scoring opportunity. Once that opportunity is gone, you should whistle to stop play and book the player. The 20 yards can be enforced either from the spot of the foul, or the end of play, whichever is of greater benefit to the non-offending team.

If a Flagrant or Technical Foul is committed after a goal or between periods, then this will be enforced on the ensuing pull with the appropriate yardage penalty. Other minor infractions such as after catch contact are not enforced.

11. Signaling Calls

11.1 How to signal

For the benefit of the teams, fans in attendance, and viewers of any media presentation, referees should communicate any calls clearly, quickly, and use the appropriate hand signals. Try to face the stands when signaling so the fans can see the call. If media is present, you may want to be mindful of where the cameras are and signal towards them instead. Hopefully they will be on the same side of the field, but if they are not, the Head Referee may want to consult with the media to see if they want signals directed towards them.

Referees should follow the same procedure when announcing calls:

1. Whistle.
2. Signal the call and announce it loudly.
3. Announce the offending team - "offense" or "defense" - when appropriate (e.g., not for travel). If this is a Flagrant/Technical foul, point to the player who committed the foul.
4. If this is a yardage penalty, communicate the yardage to the players and point calmly in the direction of the yardage.
5. If this is a spot foul, announce it, point at the spot of the foul, and demonstratively point in the direction of attack using the "first down" motion.
6. Once the thrower establishes the proper pivot spot, the referees are in position, and the marker is set, provided the marker makes an effort to set up quickly, remind players to "start on my whistle." In the case of a stall, no thrower needs to have the disc. Simply remind players to "start on my whistle."
7. Whistle to restart play.

It should sound something like this:

"<Whistle>, Contact, Defense. 10 yards <Motion Direction>. Wait for the whistle, <whistle>."

All officials should mirror the call signal for better communication to the audience and broadcast booth. Both onfield officials should mirror the calls and hold signals so that the announcers are able to see the call.

In the case of an offensive foul, so the stall increases by one instead of being reset, hold up the appropriate number of fingers and tell the thrower/marker the next stall number that you are going to say before restarting play. The thrower/marker typically turns around to let their team know that it is a short stall.

For Flagrant or Technical fouls, stop the clock with a double whistle and X wave above your head. Then, signal the Flagrant or Technical foul. Point to the player receiving the foul. You or your crew can help communicate the call and player team/number to both head coaches. It is also good to radio this information to the clock operator, who can normally relay the information to an announcer so that the crowd becomes aware of which player received the foul. Assess the yardage penalty and then restart play. For Flagrant and Technical fouls, it is important to communicate the team and player number that receives the foul, since 2 Flagrant or 2 Technical fouls in one game results in an ejection.

11.2 When to whistle play in

A good rule of thumb to use is "Whistle Out, Whistle In." If a whistle has been blown to stop play (besides a goal), then a whistle is required to restart play. Regardless of who blew the whistle to stop play, the Trail Referee should be whistling play back in. Make sure to communicate who will be whistling play back in to the players.

In the case of fouls where penalty yardage must be enforced, wait to blow the whistle to restart play until the

yardage has been enforced and the marker has had a reasonable chance to re-establish their mark. Do not allow either the thrower or the marker to delay this process. As players are setting up, remind them to “wait for the whistle”. This helps to avoid an unnecessary Delay of Game call. If the thrower releases the disc before you have blown the whistle, then stop play with a whistle and enforce a Delay of Game penalty. Moving and pivoting are allowed so long as the disc is not thrown before the whistle to restart play.

Referee-initiated turns (stall, timeout with none remaining) require a ref to restart play. Refs should hustle to get in position and restart play ASAP, but refs must first get into position. This helps to ensure that all players are also ready to play and understand that a ref-initiated turnover has just transpired. Once in position, whistle to restart and commence a pre-stall or stall as appropriate. Especially on a stall, players will want to restart play quickly. The new TR may blow the whistle to start play without being in ideal position so that neither team gets a significant advantage.

Whistling to start play will also be required on the pull if the pull has gone out of bounds and will be put into play at the Brick or the middle, or if Offside needs to be enforced.

In the last minute of a game, the Official will double whistle and x-wave to stop the clock if a disc becomes out of bounds. This requires a whistle to restart play. Players tend to want to put the disc into play quickly in this situation. As soon as a player has the disc and a proper pivot, the new Trail Ref should whistle the disc back into play even if they are not in position yet. If the disc has been placed at the right spot but no player has picked up the disc, the official should whistle and start the pre-stall, though the clock will not start with the winding signal until release of the throw.

To summarize, whistle play in:

- when there has been a call with a whistle (Foul, Timeout, Stall, etc.)
- when a pull goes out of bounds so the disc is being put into play at the brick
- when Offsides is called on a pull
- when there is <1 min left and the disc became out of bounds except on the pull

12. Signaling Goals and Watching the Field

It may be confusing as to who should signal a goal when all four referees are near the end zone, such as in the red zone positioning.

Use these guidelines to ensure that at least one referee signals the goal:

- If the disc is caught close to the goal line and it is a goal, the Sideline Referee on the side of the field where it was caught should make the signal.
- Otherwise, the closest of the Sideline Referees and the Deep Referee to the play should make the call.
- The Trail Referee should not have to make the initial signal, though they are free to echo it for easier viewing by the fans and cameras.

It is very important that a whistle occurs on a goal. If you're not sure, better to have multiple whistles than none at all. Also, even though a goal results in a clock stoppage, you only need to whistle once on a goal, not twice like for other clock stoppages. The clock stoppage is implied.

Once a goal has been scored, it is the Deep Referee's/Pulling Referee's and SRs' responsibility to watch the field until players have moved to their sideline or new goal lines. The Pulling Referee and SRs must look closely for unsportsmanlike conduct between points, including pushing, taunting, or spiking at an opponent.

13. Be Prepared and Professional

13.1 Be Prepared

Prepare yourself mentally for the unexpected. The rules and manual cannot cover every conceivable situation, so be prepared to think on your feet, reflect on your experiences, and to share them with your Regional Head Referee. Some unusual circumstances will likely arise at some point. For example:

- The integrity rule may be invoked. Allow yourself to be overruled or to mirror the player's call, and praise the player for their sportsmanship. Remember that the Integrity Rule can only be invoked on calls made or on non-calls if the call would result in a change in possession. For example, a player can overrule a call involving themselves if the call was in their favor, or a player can make a call against themselves if the call results in a change in possession to the player's detriment. More specifically, a player can overrule an in bounds or goal call by a referee by calling themselves out of bounds or not in the end zone. A player can overrule a pass interference call by saying that they were not interfered with. A player can overrule a pick call by saying they were not picked. A player can also invoke the integrity rule by saying they fouled the thrower, if no ref made a call and the throw resulted in a turnover. A player can invoke the integrity rule by saying they interfered with a receiver, if no ref made a call and the pass was incomplete.
- Review 14.2 (Injury Timeout). Remember that players are used to calling their own injuries, but that this is now your call. If a player needs immediate medical attention, then stop play immediately. If a player's injury is not severe, then stop play only after an imminent scoring opportunity has passed. For example, if a defender rolls their ankle while covering a receiver streaking toward the end zone, allow the offense to complete that pass. Once the immediate scoring opportunity is over, then stop play and allow for a substitution.
- Remember that you have the elastic power (15.5). If a novel situation arises, address it to the best of your ability, and then share your experience with the Director of Officiating. The Post Game Report is a good place to do this.
- Referees need to anticipate disc and player movement and make every effort to avoid any contact. If a referee contacts a player or a disc, the referee is considered neutral. They are neither in nor out of bounds, and neither in the air nor touching the ground. Referees are treated as if they are air.
- Read and understand the Inclement Weather Policy so that you're ready to act appropriately when inclement weather arises.

Finally, it is better to get the call right than to make the wrong call quickly. If confusion arises on the field or multiple referees disagree over a call, then stop play and briefly consult. Do not hesitate to do this; professional referees in all sports regularly consult during a game.

13.2 Professional Appearance

Referee crews should keep a consistent area where they convene before the game, at halftime, and after the game. Ideally, referees should be out of public view at halftime. A locker room or shelter away from the main field area should be used if available. Before the game, once reporting to the field and after finishing their inspections, referees should meet at one of the sidelines at midfield until introductions.

In between quarters (not including halftime), referees should meet at midfield. Use this opportunity to discuss what you saw during the quarter and any calls that came up that might need further explanation.

During timeouts, all game referees should huddle up with the head ref near the disc, but out of the way of both teams so that they can plan their offense or matchups. If the timeout is between points, the huddle should take place at midfield.

During any meetings, downtime, national anthem, or other times when you are in public view, assume a professional and confident posture. Back and arms should be straight and try to avoid hands on hips.

14. The UFA Difference

Rule	UFA	Club Ultimate
Spirit of the Game	Rules 1.1.1, 1.1.2, and 13.6	Rule 2A - 2K in the USAU Rulebook.
Officials	Four officials make all calls, and players make integrity calls.	Players make active calls. Two to four observers make some rulings and some active calls.
Penalties	10yd, 20 yd, and spot penalties for most infractions.	Play stops and the continuation rule is typically applied.
Unsporting Acts	20 yd penalty, possible ejection. Two Flagrant or two Technical fouls on a player in one game is an automatic ejection.	Technical, personal and team misconduct fouls can result in position penalties or ejection.
Advantage	Some calls are delayed until the result of a play is determined, then the penalty applies or play continues.	In some cases, play can continue until the outcome of the first pass after a call has been determined.
Movement During Stoppages	Players (except the thrower) may move freely during any stoppage.	Players must establish proper position and then may not move during a stoppage.
Penalty in End Zone	Disc comes into play centered on the goal line.	N/A.
Field	80 yd x 53 ½ yd, plus 20 yd end zones.	70 yd x 40 yd, plus 20 yd end zones.
Restraining Line	Only on field players and officials are permitted within six yards of the entire playing field.	Only on field players and observers are permitted within three yards of the playing field.
Players' Box	Teams restricted to their 10-30 yd line if sharing a sideline, or between the 10 yd lines if on opposite sidelines.	No restrictions. Teams regularly have players roving both sidelines.
Pylons	Neutral; treated like air.	Out of bounds.
Game Day Roster	12 to 20 players may dress for a game.	Any eligible rostered player may play.
Game Length	Four 12-minute quarters.	Played to points, typically 15, with a cap.
Overtime	One 5-min period. If tied, then sudden death.	Play continues with soft or hard cap.
Time Between Pulls	30 sec for offensive readiness, 50 for defense to pull.	60 sec for offensive readiness, 80 for defense to pull.
Timeouts	Two per half, one per overtime. 60 sec. Resets stall count, full substitution allowed (offense limited to the first 30 seconds and defense to the first 50).	Two per half, 70 sec (plus 20 for defense), stall count remains, no substitutions.
Timeouts After Pull	The thrower with the disc and pivot or the head coach on the sideline may call a timeout.	Only the thrower with the disc after surviving ground contact may call a timeout.
Injury Timeouts	Stall count resets.	Stall count does not reset.
Pre-Stall	10 sec from when the disc settles on the entire playing field or is placed on the appropriate spot by a referee.	10 sec when the disc settles on the central zone, 20 sec elsewhere.
Stall	7 sec, kept by the trail referee.	9 sec, counted verbally by the marker.
Number of Markers	2 (3 markers is a triple team).	1 (2 markers is a double team).
Picks	Any movement by an offensive player that results in an obstruction of a MOVING defender guarding an offensive player. A STATIONARY defender can see an offensive player to their front or side, so it is not a pick.	Any movement by an offensive player that results in an obstruction of a defender guarding an offensive player.

Rule	UFA	Club Ultimate
Offside	No warning. Disc at midfield if on pulling team, reverse brick if on receiving team, brick if on both.	The offense has the option to bring the disc to their defended brick for the first offsides infraction, or midfield for subsequent infractions. For a false start, the defense is given an opportunity to match up after the pull is resolved before play continues.
Pull Rolls Out Back	Disc comes in at the closest spot on the entire playing field to where it went out, even the back line.	Disc comes in at the closest spot on the central zone to where the disc went out.
Defense Touches Pull in the Air	Delay of game penalty on pulling team. 10 yd from where the disc was touched.	Receivers can ask for a re-pull.

NOTES:															

Appendix A: When in Doubts

When in doubt, the defender is NOT within 3 yards.

When in doubt, it is NOT a stall.

When in doubt, it is NOT a foul.

When in doubt, a rolling disc has NOT been touched.

When in doubt, the disc IS catchable.

When in doubt, the pass is incomplete.

When in doubt about player safety, it is a Flagrant foul.

When the coach raises their voice, we lower ours.

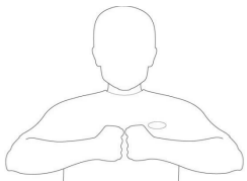

Appendix B: Common Hand Signals Summary

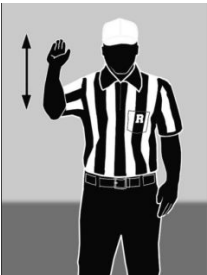

Common Hand Signals: Calls that Stop Play

The calls in this section stop play and should be preceded by a whistle.

Goal: Stand still, then fully raise both arms with palms facing inward. Hold this signal for three seconds while standing still. It's ok to wait to start your watch between points until after the goal signal is complete. If you're using a fingergrab whistle, whistle first, then raise both arms together. Whistling while raising the other arm alone could be confused for an advantage signal.	
Pass Interference: Extend both arms straight in front of you, with palms facing outward. If you're using a fingergrab whistle, whistle first, then extend both arms together. Whistling while extending the other arm alone could be confused for a contact signal.	
Contact: Extend one arm straight in front of you, with the palm facing outward.	
Strip: Raise one arm briefly, then lower it forcefully as if pulling a disc out of the air. If this call results in an awarded goal, it should be followed by the goal signal instead of pointing in the fouled player's direction of attack.	
Travel: Hold both arms level in front of you facing across your body, then rotate your fists around each other for two revolutions.	

Pick: Place both hands on your waist, with your thumbs pointing back and both elbows bent away from your body.	
Illegal Marking: This is used for triple teams or an illegal double team in last 5 seconds of a quarter or OT after a defense foul. Cross both arms over your chest, with fists closed.	
Vision Blocking: Wave one hand a few inches in front of your eyes, with the palm towards your face.	
Delay of Game: Hold one arm level in front of you at an angle, then tap that arm's wrist with the opposite hand's fingers.	
Flagrant Foul: Cross both arms overhead in an X, holding them together for three seconds, then point at the player who committed the foul. If this call results in an ejection, it should be followed by the ejection signal.	
Technical Foul: Make a T with your hands and hold the signal for 3 seconds. Then, point to the player and use your fingers to signal the player's number. If this call results in an ejection, it should be followed by the ejection signal.	

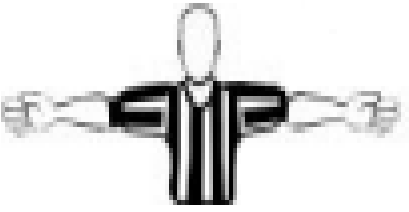

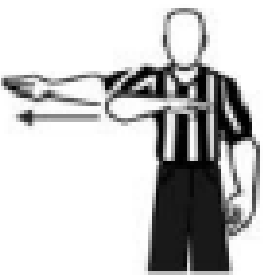

Ejection: Extend one arm straight in front of you with the fist closed and thumb up, then raise that arm backwards quickly until the thumb points over your shoulder.	
Fighting: Bend one arm in front of you with the fist closed, then raise the fist quickly to within a few inches of your chin, mimicking a punch. This call should always be followed by the ejection signal.	
Double Foul: Bump your fists together in front of your chest, with the backs of your hands facing outward.	
Integrity: Bring your arms to your sides with elbows bent and both arms straight in front of you. Start with your palms facing upward, then rotate both forearms to face downward.	
Team Timeout: Double X wave to stop the clock if this happens during game play. Then extend both arms straight in front of you pointing towards the end zone defended by the team calling the timeout, with palms facing inward.	
Injury Timeout/Technical Timeout: Raise both arms to your sides with elbows bent, then tap both shoulders with your fingers.	
Injury Substitution: Bend both arms in front of you, with one arm slightly forward of the other and both index fingers pointing up. Then move both arms forward and backwards opposite each other.	

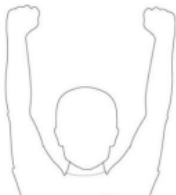

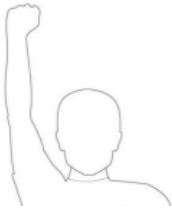

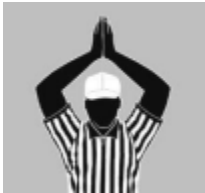

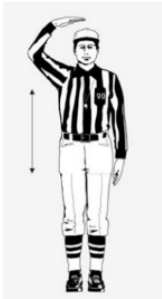

Stall: Place one hand flat a few inches over the top of your head with the palm facing downwards, then tap the top of your head twice.	
Offside: X-Wave of arms over the head	
Clock Stoppage: Wave both arms overhead two times, crossing and uncrossing your arms quickly.	
Clock Reset: If you need to make a clock correction, pump one hand vertically over your head. Radio to the clock operator to let them know the correct time.	

Common Hand Signals: Calls that Do Not Stop Play

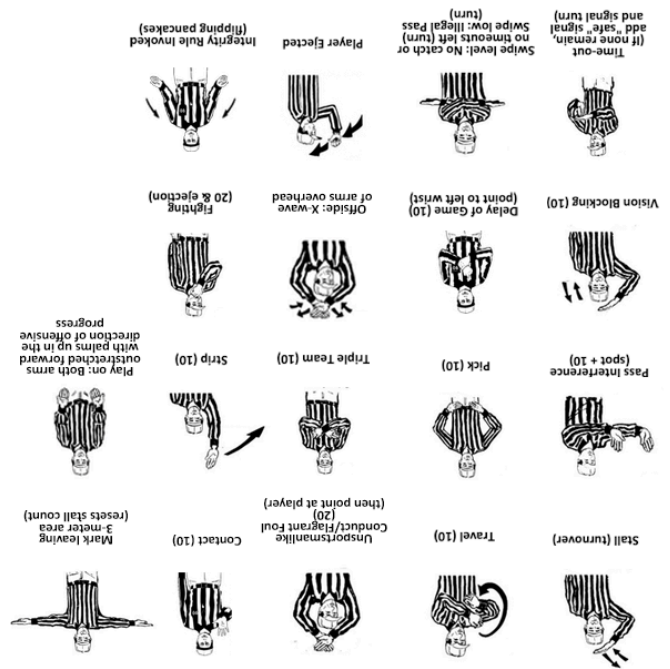

The calls in this section do not stop play, and should be signaled without a whistle unless last-minute timing rules apply. Other exceptions are noted below.

In/Out/Not in the end zone/Yardage penalty: Extend one arm straight, with the palm flat and the thumb on top. • In: Point towards the primary playing field perpendicular to the sideline, and announce "in." • Not in the end zone: Point towards the primary playing field perpendicular to the goal line, and announce "not in." If a catch is near both the attacking goal line and a sideline, give only this signal and do not signal "in" separately. • Out: Point away from the playing field perpendicular to the sideline, and announce "out." If players continue playing, then whistle to stop play and repeat the call. Also use this signal after each foul is called, pointing in the fouled team's direction of attack while walking in that direction.	
Up: Bend one arm in front of you with the index finger extended, and announce "up."	
Down: Point one arm downward at a 45-degree angle with the index finger extended, and announce "down." If players continue playing, then whistle to stop play and repeat the call.	

Advantage pending/Receiving team ready/Clock is stopped: Raise one arm straight up, with an open hand facing forward.	
Advantage given: Extend both arms straight in front of you pointing towards the fouled team's direction of attack, with open palms facing upward. Announce "play on" with this signal.	
Start the clock: Straighten one arm by your side, then wind that arm around your shoulder for one full revolution.	
Unmarked: Extend both arms straight to your sides, with palms facing forward. This signal should be made when all defenders leave the three-yard-radius marking circle around the thrower and when a player catches the disc with no defender within three yards. Keep your arms extended until a defender enters the marking circle or the disc is released.	
Stall count: Raise one arm level to your side with elbow bent outward, then straighten and bend your arm at one-second intervals with the palm facing downward. Only the last three seconds of the stall count should be signaled this way; the first four seconds have no signal and are silent. Time the straightening of your arm so that your arm is fully extended at the five-, six-, and seven-second marks. At the five- and six-second marks, announce "five" and "six" respectively. At the seven-second mark, whistle and signal a stall instead of announcing "seven". The same motion can be used to count the last 10 seconds before readiness is required on a pull.	

20 seconds: Raise both arms straight up, with fists closed and palms forward.	
10 seconds: Raise one arm straight up, with the fist closed and palm forward. While this countdown is active, chop your arm at one-second intervals using the stall count signal, and announce "five", "three", "two", and "one" when there are that many seconds remaining in the countdown.	
Pull rolls out before midfield: Raise both arms overhead and clap your hands together with palms facing each other.	
Uncatchable: If there is no call due to a pass being clearly uncatchable, then take the palm of your right hand parallel to the ground and move it back and forth above your head.	

Common Hand Signals

Pre-Game Checklist

Survey the field, check lines and cones
Check that benches are in the right spot
Acquire 9 discs from the home team
Talk to Disc Runners, if available, and give them discs
Determine who will time and who will score
Ensure each team has 12-20 active players
Ensure that players wear proper uniforms
Inspect players for jewelry
Ensure hard protective objects are covered

Head Referee should:

Meet with gameday ops for pre-game routine (anthem, introductions, coin flip)
Any special events? How long is halftime?
Enquire if there are issues with the field
Conduct pre-game meetings with crew, coaches & captains

Equipment Checklist:

UFA black or white hat
UFA jersey
Black base layer for cold
Black shorts/skirt/pants
Black short socks
Black/Muted/White Cleats
Rulebook (physical or digital)
Coin
Whistle
Stopwatch
Sideline Marker
